46. Most trees produce a ring of new wood each year and these circles of growth can easily be seen in a cross-section of the trunk of a felled tree. ---- First, the rings become narrower with the increasing age of the tree. Second, the amount a tree grows each year is affected by fluctuations in climate. A) A narrow growth ring may be the result of a cold spell in spring B) in temperate regions, sunlight may be more important than rainfall in affecting a tree's growth C) Several conditions can contribute to a particularly thick annual ring D) These rings are not of uniform thickness and vary for two reasons E) Results have been particularly impressive in the American Southwest for a variety of reasons **KPDS-KASIM 2004 A+PLUS ENGLISH**	Paragraf tamamlama sorularında başvuracağımız yöntemlerden birisi seçeneklerde verilen cümlelerin özne, yüklem ve diğer ifadelerin paragrafın bütünlüğüyle uyumlu olmasıdır. Seçeneklere dikkatlice baktığımızda "d" seçeneğindeki "these rings" ifadesi "these circles"; "two reasons" ifadesi ise "First…, Second…" ifadelerine referans etmektedir. **CEVAP "D" SEÇENEĞİDİR**

48. To help users find reliable nutrition Information on the internet, this university maintains an online rating and review guide called the Nutrition Navigator. -----. Each website receives a score from 1 to 25, and links are provided to recommended sites. A) For instance, many televised nutrition messages are presented by celebrities, food editors and chefs B) Even so, the Nutrition Navigator remained the best site from which to launch ventures into nutrition cyberspace C) Many people turn to their physicians for dietary advice, expecting them to know all about health related matters D) The ratings reflect the opinions of a panel of nutrition experts on selected websites on the basis of their accuracy and depth E) The Internet offers no guarantees of the accuracy of the information found there **KPDS-KASIM 2004 A+PLUS ENGLISH**	**"The ratings" ifadesi soru köküdeki "score from 1 to 25" ifadesine referans vermektedir.** **CEVAP "D" SEÇENEĞİDİR**

47- Until the development of the first scientific dating techniques around the beginning of the last century, dating in archaeology depended almost entirely on historical methods. -----. Such dating methods are still of immense value today. A) For instance, excavations in Egypt at the and of the 19th century brought to light pottery of Aegean origin B) In the ancient world, literate societies such as these recorded their own history in written documents C) The chronological system requires even more careful reconstruction, and any list of rulers or kings needs to be reasonably complete D) Other areas of Mesoamerica had their own calendars which operated on similar lines E) That is to say, it relied on archaeological connections with chronologies and calendars that people in ancient times had themselves established **KPDS-MAYIS 2004 A+PLUS ENGLISH**	Bu soruda boşluktan sonra geçen "such dating methods" ifadesi bizi "e" seçeneğindeki "chronologies and calendars" kelimelerine götürür. Örnek vermek için "such" ifadesi kullanıldığında bir önceki cümlede verilen örneklerin genellemesi yapılır. Yani "methods" bu durumu tersten düşünürsek cevabımız "e" seçeneği olur. Yine aynı şekilde bir önceki cümlede örnek genelleme verildikten sonra "such as" ifadesiyle genellemenin öğeleri verilir. Bu tarz sorular cümle tamamlama tipi sorularda da sık sık karşımıza çıkar. **CEVAP "E" SEÇENEĞİDİR**

46. The cell theory, one of the fundamental unifying concepts of biology, states that all living organisms are composed of basic units called "cells" and of substances produced by cells. Although they vary greatly in size and appearance, all organisms are composed of those small building blocks. Some of the simplest life forms, such as bacteria, are *unicellular*: they consist of a single cell. ---- In these complex *multicellular* organisms, life processes depend on the coordinated functions of the component cells.

A) Although plants do not move about in the way we associate with animals, they do move.

B) One of the remarkable aspects of the growth process is that each part of the organism continues to function as it grows.

C) Humans and many other organisms begin life as a fertilized egg, which then grows and develops specialized structures and body form
.
D) In contrast, the body of a human or an animal or a tree is made of billions of cells.

E) Energy is required to maintain the precise order that characterizes living systems.

47. Gregor Mendel was not the first plant breeder. At the time he began his work, hybrid plants and animals had been known for a long time. Mendel's genius lay in his ability to recognize a pattern in the way the parental traits reappear in the offspring of hybrids. ----

A) It is true that Mendel was a clergyman who bred pea plants in his monastery garden at Brno, Czech Republic.

B) Therefore, at that time biology was largely a descriptive science, and biologists had Little interest in experimental studies.

C) So it is clear that Mendel's "hereditary factors" are essentially what we call "genes" today, which is one of the major subjects of modern biology.

D) In fact, geneticists study not only the transmission of genes, but also the expression of genetic information.

E) No one before him had categorized and counted the offspring and analyzed these regular patterns over several generations.

48. From about 1300 until about the middle of the fifteenth century, disasters struck throughout western Europe with appalling severity and dismaying persistence. ---- *(2)Then* came the most terrible natural disaster of all: the dreadful plague
known as "the Black Death." It reduced the total population of western Europe by at least one half and caused great hardships for most of the survivors.

A) Europe emerged in the later fifteenth century with a healthier economy.

B) Of these disasters, famine was the***(1) most*** widespread and persistent.

C) There was a limit to the amount of land that could be cleared for farming.

D) Overcrowding made Europe's cities particularly vulnerable to the plague.

E) Large-scale banking had already emerged during the thirteenth century.

CEVAP "B" SEÇENEĞİDİR

50. The economic depression of the 1930s forced many writers to re-examine the style and purpose of their work. Among threats of economic devastation, totalitarianism, and war, literature became increasingly politicized. Authors were largely interested in the depiction of injustice and cruelty and felt obliged to point the way to a better society. ----

A) In his great poem *The Waste Land* the Anglo- American poet T.S. Eliot presented a philosophy that was close to despair.

B) In his novel *The Sun Also Rises*, Hemingway gave the public a powerful description of the socalled "lost generation".

C) Moreover, they no longer directed their work to fellow intellectuals alone, but to ordinary men and women as well.

D) Furthermore, Virginia Woolf's essays and novels offered an eloquent and severe critique of Britain's institutions and universities.

E) As for Bertolt Brecht, he rebelled against high culture and bourgeois values, but he also protested against the pretentious elitism of his contemporaries.

51. The development of genetic engineering has stemmed from the discovery of DNA in the 1950s. By the 1990s, several laboratories in the West were engaged in the most ambitious medical research ever attempted: the mapping of the human genome, that is, the entire architecture of chromosomes and genes contained in basic human DNA. ---- For instance, infertile couples could now conceive through out-of-body medical procedures.

A) As a new form of knowledge in an age of global interconnection, genetic engineering has forced many nations to make changes in their laws and regulations concerning medical practices.

B) In Africa, Latin America, and elsewhere, political chaos, imbalances of trade, and the practices of some pharmaceutical companies have often resulted in shortages of medicine.

C) As AIDS became a global health crisis in the 1980s, international organizations recognized the need for an early, swift, and comprehensive response to future outbreaks of disease.

D) Through this process and alongside it, genetic engineers developed methods to alter the biology of living things, including humans.

E) Moreover, genetically engineered human growth hormone is required by some children to overcome growth deficiencies.

43. In recent years, many countries in Africa have faced severe food shortages as a result of extended drought. The reduced capacity for food production has been catastrophic for a population of over 200 million *people*, ~~some of whom have~~ *died of starvation*. ---- In order to rehabilitate *these victims*, the international community brings in emergency aid, both in the form of food supplies and of technical assistance. However, the drought hazard in Africa is expected to continue, recurring at unpredictable intervals.

A) It is especially the rural people in Africa who need to be trained efficiently.

B) As regards the continent's precious top-soil, it is being lost at an incredible rate.

C) The human population in Africa's arid and semiarid areas has doubled in the past three decades.

D) Among the ***survivors,*** many will suffer impaired health for the rest of their lives.

E) Unless serious measures are taken, the economic situation could lead to political chaos.

46. Like language, music is a uniquely human activity. Although music is often spoken of as a kind of language, it is certainly not within the same space of possibilities as natural human languages. Music *communicates* something, perhaps emotional states. It is sometimes symbolic; for instance, when the Wedding March is played to symbolize weddings. ---- Therefore, it seems appropriate to treat music as a form of *communication*, but not as a *language* in the technical sense.

A) That is why composers aim at aesthetic pleasure while they compose their music.

B) The right hemisphere of the brain is involved in musical perception and in experienced musicians the left hemisphere is also involved.

C) Yet it shares few of the ***grammatical*** and ***expressive*** possibilities found in all standard languages.

D) In the opera, for instance, music and language combine.

E) This shows that musical ability is largely based on auditory and rhythmic processing.

CEVAP "C" SEÇENEĞİDİR

42. Energy can be transformed from one form to another. A *stone* held high in the air has potential energy; as it falls, it loses potential energy, since its height above the ground decreases. At the same time, *it gains in kinetic energy*, since its velocity is increasing. Potential energy is being transformed into kinetic energy. ---- At the base of *the dam*, *the kinetic energy* of the water can be transferred into turbine blades and further transformed into electric energy.

A) As for potential energy, it is the energy associated with forces that depend on the position or configuration of a body or bodies and the surroundings.

B) The word "work" has a variety of meanings in everyday language, but in physics, work is given a very specific meaning to describe what is accomplished by the action of a force.

*C) **Similarly,** water at the top of a dam has potential energy, which is transformed into kinetic energy as the water falls.*

D) Besides the kinetic and potential energy of ordinary objects, there are other forms of energy, which include electric energy, nuclear energy, thermal energy, and chemical energy.

E) For instance, according to the atomic theory, thermal energy is interpreted as the kinetic energy of rapidly moving molecules.

CEVAP "C" SEÇENEĞİDİR

45. Sometimes organisms modify their own microclimate. For instance, trees modify the local climate within a forest so that in summer the temperature is usually lower, and the relative humidity greater, than outside the forest. The temperature and humidity beneath the litter of the forest floor differ still more; in the summer this area is considerably cooler and moister than the surrounding forest. ---- The cooler daytime microclimate in their burrows permits *them* to *survive* until night, when the surface cools off and *they* can come out to forage or hunt.

A) As another example, *many desert-dwelling* ***animals*** burrow to avoid surface climatic conditions that would ***kill*** them in minutes.

B) An area's ~~climate~~ comprises the average weather conditions that occur there over a period of years.

C) One of the most important climatic factors is ~~temperature~~, which comprises both average temperature and temperature extremes.

D) ~~Precipitation~~ is greatest where warm air passes over the ocean, absorbing moisture, and is then cooled, such as when humid air is forced upwards by mountains.

E) Actually the tropics are hotter and less variable in climate than are temperate and polar areas.

CEVAP "A" SEÇENEĞİDİR

46. Fires were a part of the natural environment long before humans appeared, and many terrestrial ecosystems have adapted to it. African savana, North American grasslands, and pine forests of the southern United States are some of the fireadapted ecosystems. For example, fire helps maintain grasses as the dominant vegetation in grasslands by removing fire-sensitive hardwood trees. The influence of fire on plants became even more evident once humans appeared. ---- *Indeed, humans set fires for many reasons*, such as for agricultural exploitation and urban development.

A) Humans also try to prevent fires, and sometimes this effort can have disastrous consequences.

B) Because ***humans deliberately and accidentally set fires***, fire became a more common occurrence.

C) When fire is excluded from a fire-adapted ecosystem, organic litter accumulates.

D) The deadly fire in Colorado during the summer of 1994 claimed the lives of 14 firefighters.

E) Controlled burns are used to suppress firesensitive trees, thereby maintaining the natural fire-adapted ecosystem.

"FOR INSTANCE" DEDİĞİNE GÖRE VERDİĞİ DETAYLARIN GENEL BİR İFADESİNİ İSTECEK

CEVAP "E" SEÇENEĞİDİR

46. An independent city close to Berlin, Potsdam has almost 150,000 inhabitants and is the capital of Brandenburg. ----. The town blossomed in the *(3)1600s*, during the era of the Great Elector, and then again in the *(4)18th century*, when the splendid summer palace, Schloss Sanssouci, was built for Frederick the Great. Potsdam suffered badly in World War II, particularly on April 14 and 15, *(5)1945*, when the Allies bombed the town centre.

A) The Marmorpalais (Marble Palace) is located on the edge of the lake in the Neuer Garten, a park northeast of Potsdam's centre

B) Despite its wartime losses, Potsdam is today one of Germany's most attractive towns

C) The Schloss Cecilienhof played an important role in history in 1945, when it served as the venue for the Potsdam Conference

D) The first documented reference to the town dates from *(1) A.D. 993*; it was later granted municipal rights in *(2)1317*

E) Tourists flock to see the magnificent royal estate, Park Sanssouci, and to stroll in the Neuer Garten

48. *The Scandinavian countries* – Denmark, Norway, Sweden, and Finland – are, arguably, *among the least-populated* countries in Europe. ----. Away from the main towns and cities lie vast expanses of unspoiled, often wild terrain, from the breathtaking Norwegian fjords to the dense pine forests and clear lakes of Finland. Smaller and largely flat and rural, Denmark shares characteristics with both mainland Europe and Scandinavia proper.

A) ***In Norway, Sweden, and Finland***, ***the majority of the population*** lives in the south, in affluent, modern cities, which are also rich in history and tradition

B) Sweden is Europe's fifth-largest country, with an area about the size of California

C) Finland's main cities are all served by an efficient railroad system and regular, inexpensive internal flights

D) Norway is so long and narrow that, if Oslo remained fixed and the rest were turned upside down, it would stretch all the way to Rome

E) Oslo, Norway's capital, is an attractive city of grand Neoclassical buildings, wide boulevards, and green open spaces

The Scandinavian countries= In Norway, Sweden, and Finland

among the least-populated X the majority of the population

CEVAP "A" SEÇENEĞİDİR

51. In finance, *interest*, which is a sum of money paid by a borrower to a lender in return for the loan, is usually expressed as a percentage per annum. -----. In *2-compound interest*, the interest *earned* over a period of time is added to the principal, so that at the end of the next period, interest is paid *on that total*.

A) Nevertheless, certain problems remain in perennial interest, and these fall into two main groups

B) The theory of capital was not a matter of primary concern to economists in the late 20th century

C) ***1-Simple interest*** is calculated as a straight *percentage of the amount loaned or invested*, called the principal

D) However, it may be expressed either in money terms or as a rate of payment

E) Various theories have been developed to account for and justify interest

KPDS-SPRING 2008

1. INTEREST: SIMPLE AND COMPOUND INTEREST
Faiz çeşitleri simple ve compound olmak üzere ikiye ayrılıyor.
2. EARNED+PAID ON TOTAL+AMOUNT INVESTED+AMOUNT LOANED=PERCENTAGE
Yukarıdaki ifadelerin hepsi miktar ve oran ile ilgili!!!

CEVAP "C" SEÇENEĞİDİR

51. Western perceptions of the Middle East as a viable tourist destination have been adversely affected by the 9/11 terrorist attacks in the US, the subsequent war on terrorism, and the war in Iraq. Indeed, the impact of the 9/11 attacks upon the tourist sector in the region has been profound. ----. *North Africa* in general and *Tunisia* in particular have fared comparatively well, but *Morocco* has suffered badly.

A) Morocco is already one of the biggest tourist destinations in the Middle East and North Africa, drawing 2.25 million visitors a year

B) Especially, the effect on visitor numbers has been decisive although it has varied considerably ***from country to country***

C) Morocco has a better developed domestic beach culture than probably anywhere else in the Middle East or North Africa

D) The target of 10 million visitors a year by 2010 may have been a little over-optimistic, although Egypt has made huge investments

E) Some of the driest parts of Morocco lie on the coast, and so one feasible option is to pipe water there from the Atlas Mountains

CEVAP "B" SEÇENEĞİDİR

48. Ice climbing and rock climbing share some important features. Both use ropes, harnesses, and other specialized equipment for ascending steep granite or blue ice. ----. A rock climber follows the natural cracks or weaknesses in the rock whereas, with ice tools in each hand, an ice climber has more freedom to blaze a path up and is limited only by the ice conditions and the technology of the tools.

A) Most ice climbing trips require an arduous trek into the mountains and possibly several nights out in the cold

B) But, the method of climbing in each case is different

C) However, climbing itself has always been considered to be very dangerous

D) There are many tragic stories of climbing accidents

E) But once you find your footing, ice climbing can become addictive

1. metindeki "whereas" zıtlık/farklılık belirtir buda bizi "B" seçeneğindeki "different" kelimesine götürür

2. ıce&rock climbing ve ice&rock climber konumuz. Paragrafın genelinede hep iki durum ele alınmış ve bu bariz açık. B seçeneğindeki "each case" ifadesi paragrafın geneline mükemmel şekilde refer eder

3. Boşluk öncesi tırmanma ve kullanılan malzemelerden, sonrasında ise metodlardan bahsediyor. Konu tırmanma ile ilgili ancak alt başlıklar boşluk öncesi ve sonrasında farklılık gösteriyor. B seçeneğindeki "BUT" bu geçişi en iyi verecek bağlaçtır.

CEVAP "B" SEÇENEĞİDİR

44. Photo interpretation in archaeology is the process by which features photographed from the air, such as soil-marks, are analyzed in order to deduce the types of archaeological structures causing them. ----. Such plans may guide excavation to key points in a structure, place field-collected data in context, or themselves be used as the starting point for new research.

A) Archaeologists may use aircraft to search the ground for traces of former sites in the landscape

B) Given that the visibility of features varies from year to year, photos taken over several years need to be studied to compile an accurate plan

C) The aerial photograph also highlights an interesting earlier feature: a shallow Neolithic ditch running across the middle of the fort

D) Soil marks may reveal the presence of varied ditches, banks or foundations

E) Those who take and use aerial photographs must understand the means by which the evidence is made visible in order to determine the type of feature that has been recorded

45. Near-death experiences are relatively stereotyped in format. ----. They often describe sensations like "floating" or "flying". These experiences can also cause fear or a feeling of detachment, but they are usually described as intensely "real" – not at all like a dream or a hallucination.

A) People who have had such experiences say that they seemed to be no longer in their own body but outside it, looking down on themselves from two or three metres above

B) Survivors of these experiences may, weeks later, experience a surge of emotionality, as if emotions of every sort were being stimulated or released

C) Sometimes, near-death experiences are followed by a sudden onset of musical or artistic interest

D) Tony Cicoria reported seeing a bluish-white light that surrounded him and having a sense of ecstacy

E) Similar near-death experiences have often been described by people who have been, or believed themselves to be, in great danger
