

İLGİSİZ CÜMLE SORULARI

- 1- (I) It's reported that more men and women are losing their hair than ever before. (II) Stress, hectic living, family history, and even pollution are being blamed for a record number of hair and related scalp disorders. (III) Ever since ancient times, human beings have been searching for a way to conquer the aging process. (IV) The problem is more common among men, of whom more than 60 percent suffer from some form of baldness. (V) Thus, miracle cures are in great demand.
- A) I B) II C) III D) IV E) V
- 2- (I) The black rat, responsible for spreading the bubonic plague that killed 25 million people in Europe in the 14th century, is making a come-back in Britain. (II) Six colonies of the rat have been discovered along the River Thames in East London. (III) There are fears that the rats, thought to be nearly extinct in Britain, may be spreading towards the centre of the capital. (IV) Some species of rat are so sensitive to even small modifications in the environment that they may be facing extinction. (V) Fortunately, none of the discovered rats have been found to carry the fleas that cause bubonic plague.
- A) I B) II C) III D) IV E) V
- 3- (I) Until about ten thousand years ago, all human beings lived in hunting-and-gathering societies. (II) Although rapidly disappearing, a few such societies still exist. (III) Their members must always be on the move in search of food, and consequently their bands are quite small. (IV) Today most people live in more complex social groups where there is a lot of specialisation. (V) Everyone performs the same jobs and has the same responsibilities, and consequently, there is more equality between the sexes.
- A) I B) II C) III D) IV E) V
- 4- (I) The 100-meter dash attracts the world's fastest humans. (II) It requires all-out-speed over the entire distance of the race. (III) An explosive start is critical because victory is often decided by as little as one hundredth of a second. (IV) Thus, at the firing of the pistol, which starts the automatic timer, runners literally explode off their blocks. (V) The 200- and 400-meter dashes, on the other hand, are run around one or more turns.
- A) I B) II C) III D) IV E) V
- 5- (I) Deep in interplanetary space, a man-made space probe is attempting to uncover some of the deepest secrets of the universe. (II) Thousands of asteroids have been discovered since the first was spotted in 1801. (III) Astronomers believe that these mysterious objects are rubble left over from the formation of the solar system, and that they've occasionally smashed into Earth. (IV) It may well have been a wayward asteroid, for example, that wiped out the dinosaurs 65 million years ago. (V) Yet no one has ever got a close enough look to be sure exactly what the asteroids are or where they came from.
- A) I B) II C) III D) IV E) V
- 6- (I) Dogs are being driven frantic by the stress of being left alone by owners with increasingly busy lives. (II) The normal life span of a small or medium-size dog is about 15 years, while a large dog lives only about ten years. (III) More than half of British vets have reported an increase in the number of dogs who suffer from separation anxiety. (IV) They say that dogs suffer from a chronic lack of stability when owners leave them alone for long periods. (V) It is ironic, though, that this should occur in Britain, which is thought of as one of the great pet-, and particularly, dog-loving nations of the world.
- A) I B) II C) III D) IV E) V

- 7- (I) The Eskimos are a race of American Indians living in the far north of Canada. (II) More than two thirds of Canada's nearly 27,500,000 residents, however, live within 300 kilometres of its southern border with the USA. (III) Traditionally, they constructed homes from ice or snow blocks, called igloos, and travelled about on sledges. (IV) However, today most Eskimos live in normal houses and travel by car or aeroplane. (V) Perhaps because of this more regular and settled existence, their population has doubled over the past twenty-five years.

A) I B) II C) III D) IV E) V

- 8- (I) With the Renaissance came a revival of interest in the art of cooking. (II) One of the reasons for this was the invention of the fork, which made sophisticated dishes, unsuited for eating by hand, possible. (III) During the Dark Ages, the art of cooking had declined in Europe. (IV) However, people in Elizabethan England scorned the fork, preferring to continue using their hands. (V) Thus, the developments in the culinary arts only took effect in England at a later date.

A) I B) II C) III D) IV E) V

- 9- (I) Conscription, or compulsory military service, was introduced in revolutionary France in 1793 and made law in 1798. (II) Under these laws, every citizen was liable for five years' service. (III) As a result, France was able to raise enormous armies. (IV) Britain ended conscription in 1960, and now the military is composed entirely of volunteers. (V) Thus, other European nations were forced to introduce conscription in response.

A) I B) II C) III D) IV E) V

- 10- (I) Both the United States and the Soviet Union have launched unmanned space probes to other planets. (II) The age of space exploration opened in October, 1957, when the Soviet Union launched the first artificial satellite, Sputnik I. (III) A month later, they launched Sputnik II, carrying aboard the first space traveller, a dog called Laika. (IV) They also put the first man into space, cosmonaut Yuri Gagarin, who completed an orbit of the Earth in 1961. (V) The Soviet Union continued to take the lead in space exploration with projects such as these, until 1967, when the United States began its programme of landing a man on the Moon.

A) I B) II C) III D) IV E) V

- 11- (I) Rossini was a nineteenth century composer, whose work consists almost exclusively of operas. (II) These include the well-known *William Tell* and *The Barber of Seville*. (III) *William Tell* was adapted from the Swiss folk tale about the legendary hero. (IV) Although the critics admired these works, he was considered a noisy composer in his day, and earned the nickname 'Signer Crescendo'. (V) Nevertheless, he was very successful, made a fortune, and virtually retired at the age of thirty-seven.

A) I B) II C) III D) IV E) V

- 12- (I) If you are interested in visiting Southern Africa but can't afford it, Graham Rankin recommends looking for work at the hotels near Maun in the Okavango Swamps of Botswana. (II) The tourist season here begins in early May. (III) At this time of the year, a number of companies arrange expensive tourist safaris in the swamps. (IV) Work in the fields, though, can be exhausting in the heat of the African summer. (V) Then, there's always the possibility of a visitor offering you a free place on a safari.

A) I B) II C) III D) IV E) V

- 13- (I) The public has long been aware that sporting contests have commercial value. (II) Until 1981, however, it probably was not aware of the extent to which athletics had really become an industry. (III) That year a seven-week strike called by the Major League Baseball Players Association forced the cancellation of 713 regular games. (IV) This led to loss of player salaries and television revenues. (V) It's because direct corporate sponsorship makes the company name known to television viewers.

A) I B) II C) III D) IV E) V

- 14- (I) The history of manned space flight has been marred by a number of tragic accidents involving the early spacecraft. (II) They were comparatively small, weighing only a few kilograms, and performed no useful scientific experiments. (III) Nevertheless, they served as proof that mankind had the means to place objects in the sky, outside the Earth's atmosphere, and to keep them there. (IV) There are now a considerable number of artificial satellites at distances varying between several hundred and several thousand kilometres above the surface of the Earth. (V) They have become highly sophisticated, and perform functions from weather forecasting to home entertainment.

A) I B) II C) III D) IV E) V

- 15- (I) One of the greatest mysteries of nature is the instinct to migrate. (II) Every year millions of creatures feel the need to move for one reason or another. (III) People who migrate from place to place looking for water sources and pasture for their animals are called nomads. (IV) Many of these creatures succeed in navigating, or finding their way, over long distances. (V) How exactly they manage to do this remains a mystery, but it is interesting to note that when a small bar magnet is attached to a pigeon, it is unable to navigate.

A) I B) II C) III D) IV E) V

- 16- (I) Addiction is an entirely different, and far more powerful, phenomenon than is habit. (II) The most effective form of treatment for addiction to heroin and other narcotics is the synthetic narcotic drug methadone. (III) The drug itself is extremely addictive. (IV) But, when it is given to heroin addicts on a daily basis, it prevents withdrawal syndrome and suppresses the drug hunger for heroin. (V) The addict is then gradually weaned from the methadone addiction.

A) I B) II C) III D) IV E) V

- 17- (I) Less than an hour's drive north of Manhattan lies one of urban America's best kept secrets: the Sterling Forest. (II) Several hundred years ago, the entire East Coast was made up of forest. (III) The forest not only shelters wildlife, but also supplies clean drinking water to northern New Jersey. (IV) Hikers can climb a fire tower and see New York from this rural wonderland. (V) It is truly remarkable to find such a refuge so close to one of the most densely populated cities in the country.

A) I B) II C) III D) IV E) V

- 18- (I) Throughout the past few centuries, there have been reports of space vehicles which have visited our Earth from an alien planet. (II) These reports of Unidentified Flying Objects (UFOs) attracted a great deal of public interest. (III) The unaided human eye, therefore, might have been tricked to the point of hallucination. (IV) So persistent were these reports that in the 1960s, the USA set up a committee to investigate them. (V) The committee came to the startling conclusion that UFOs were genuine, though they could not explain what they were or where they came from.

A) I B) II C) III D) IV E) V

19- (I) Currently the world produces sufficient food to feed itself surprisingly well. (II) In the 1960s, the worst of the food crisis was in India and Pakistan. (III) The problem is in getting it distributed fairly. (IV) Developing nations are poor and lack purchasing power. (V) Furthermore, even if they were able to import the food they need, because of the huge gaps between people's incomes, they wouldn't be able to distribute it fairly.

A) I B) II C) III D) IV E) V

20- (I) The Crimean war was fought between France and Britain on the one side, and Imperial Russia on the other. (II) The former two nations were opposed to Russian expansion towards the Mediterranean Sea. (III) The war was fought on the Crimean peninsula on the Black Sea. (IV) Apart from Russia, many other countries, including Turkey, Bulgaria, Romania and the Ukraine bordered the Black Sea. (V) Hostilities started in 1854 and ended in 1856 with a victory for France and England.

A) I B) II C) III D) IV E) V

21- (I) Many improvements in mapping coverage during the 20th century have been made through international cooperation. (II) Mapmakers of long ago drew pictures on maps to show where things were located. (III) For example, to show a village they might have drawn houses, a castle, a church and other buildings on the map. (IV) Their maps were beautiful and easy to understand, but the drawings were often so large that the map became cluttered and inaccurate. (V) Today, symbols are used instead of drawings. A town is marked by a dot or circle rather than by pictures of buildings.

A) I B) II C) III D) IV E) V

22- (I) As a writer, Emile Zola waged two great battles. (II) One was the long struggle for the acceptance of his powerful novels, and the other the courageous defense of Captain Alfred Dreyfus in the political-military scandal that divided France. (III) Slowly the truth of the case began to emerge, and it met the furious opposition of those who wanted the case kept closed. (IV) Zola won both fights. (V) The critics and the public both realised that his novels were serious studies of mankind, and Dreyfus was eventually exonerated.

A) I B) II C) III D) IV E) V

23- (I) Wood has been the most commonly used material for furniture since antiquity. (II) There are ample reasons for this. (III) Perhaps most important is that wood can be easily shaped both by hand and by power tools. (IV) It is relatively light and durable, and many types are handsomely figured and grained. (V) Yet, steel and concrete are the predominant materials used to construct high buildings and long-span bridges.

A) I B) II C) III D) IV E) V

24- (I) Pain, stiffness and swelling in the joints are the main symptoms of arthritis. (II) The onset is usually gradual, and the symptoms are worse first thing in the morning. (III) These improve with exercise of the joint. (IV) Two main functions of the joints are that they give support, and they allow movement where it is needed. (V) The symptoms are generally worse in the hands, knees, hips and spine.

A) I B) II C) III D) IV E) V

25- (I) The usual way to have your distant vision tested is to stand twenty feet from a chart of different-sized letters. (II) For children or people who cannot read, charts with pictures are usually available. (III) A visual test can also be done with an instrument set up to simulate the same distance. (IV) Similarly, there are ways to test hearing over a distance. (V) Near vision is tested by having people read standard-sized type at a closer distance.

A) I B) II C) III D) IV E) V

26- (I) The Ryder Cup is the trophy awarded in biennial matches between men's professional golf teams of the United States and Europe. (II) The governing body of golf in the United States is the United States Professional Golfers' Association, which was founded in 1894. (III) The cup was donated in 1927 by British seed merchant Samuel Ryder, who had started playing golf at the age of 50. (IV) Made of 14-carat gold on a wooden base, the cup stands 16 inches high and weighs 4 pounds. (V) The figure at the top of the trophy is modelled on Ryder's coach, British professional golfer, Abe Mitchell.

A) I B) II C) III D) IV E) V

27- (I) The urge to travel is as old as civilization. (II) However, due to the huge amounts of money required, worldwide travel is mostly enjoyed by the citizens of developed countries. (III) The great historian Herodotus roamed the ancient world, examining the customs of many lands before writing his famous 'History'. (IV) Hundreds of years later, a young man from Venice named Marco Polo set out with his father for China, and his writings opened the Far East to Europeans of his time. (V) About the same time Ibn Battutah, an Islamic scholar, travelled about 75,000 miles and recorded his wanderings in the widely-read 'Rihlah', meaning 'Travels'.

A) I B) II C) III D) IV E) V

28- (I) Tennis elbow is an inflammation of the outside of the elbow caused by oversteering the joint, as in playing tennis. (II) This can also be caused by using the arm for unaccustomed activities, such as sawing, chopping or hammering. (III) When a ball strikes a fingertip, severe pain occurs immediately. (IV) The basic problem is that the forearm cannot stand the abnormal strain. (V) Each impact is absorbed by the elbow and may create inflammation.

A) I B) II C) III D) IV E) V

29- (I) I had seen a battle on the television that was being fought in a tropical rainforest, (II) I had never believed that the quiet streets I knew so well could change into a battlefield, (III) But now those formerly neutral streets were suddenly filled with a spirit of revenge and tension. (IV) I could never understand how the fighters themselves, whatever side they were on, could take aim and fire in these streets. (V) Were they all drugged like the leader of the gang, Ahmad?

A) I B) II C) III D) IV E) V

30- (I) Queen Christina brought foreign scholars to the palace, among whom was the philosopher Rene Descartes. (II) She demanded that Descartes came to instruct her at 5.00 a.m. three days a week, which he did, even though he was a late-riser. (III) Christina, on the other hand, rarely got out of bed before noon, and often slept through lunch. (IV) She questioned him about the interplay between science and religion. (V) He tried to persuade her that all animals were mechanisms and she responded that she had never seen a watch give birth.

A) I B) II C) III D) IV E) V

31- (I) In 1901, Marconi achieved a dramatic success when he transmitted signals across the Atlantic Ocean by wireless. (II) Other scientists had thought this impossible, believing that radio waves traveled only in straight lines. (III) At first, radio was called "wireless" because it could transmit signals without wire circuits. (IV) Marconi, however, thought that the long waves he used would follow the curves of the Earth. (V) This was proved when, on December 12th, 1901, he received signals in St. John's, Newfoundland, sent from a transmitter in Poldhu at the southwestern tip of England.

A) I B) II C) III D) IV E) V

32- (I) The petrochemical industry has given us a number of synthetic materials to help us in our household chores. (II) Natural sponges from the sea have actually been used since prehistoric times, when people who lived along the seashore traded them for food and forest products from inland. (III) The ancient Greeks used them for scrubbing floors, and for padding their armour. (IV) In Roman times, sponges were used as mops, and also as paint brushes. (V) Today the natural sponge is probably more useful than ever, being used for everything from washing cars to applying face cream.

A) I B) II C) III D) IV E) V

33- (I) The variety of home appliances has greatly increased during the 20th century. (II) Originally only a few simple utensils, such as pots and pans, stoves, cutlery and ice boxes were found in the home. (III) Home appliances were designed to ease the work load in the home after the disappearance of domestic servants. (IV) They were wage-earners, who were often accommodated in the house and allowed to go out only on their off days. (V) Many, like vacuum cleaners, were developed for their labour-saving capabilities, while others were devised for their convenience.

A) I B) II C) III D) IV E) V

34- (I) When full-scale civil war broke out in Bosnia, even the experts seemed taken by surprise. (II) The capital, Sarajevo, was best known to most people as the place where the Winter Olympics had been held. (III) It was seen as only another of the fifty or more wars taking place in another obscure and backward part of the world. (IV) Reporters tended to call it either an "uprising" or a "revolt". (V) These were their patronising terms for a war of no importance.

A) I B) II C) III D) IV E) V

35- (I) Gourmet chefs complain that multinational companies have steadily reduced the world's varieties of foods. (II) For example, in India at the turn of the century there were 30,000 varieties of rice. (III) Now there are only twelve. (IV) It must also be remembered that India was a British colony at the time. (V) Consumers are partly responsible, as they want convenience, speed and lower prices, and so often play into the hands of the multi-nationals.

A) I B) II C) III D) IV E) V

36- (I) At one time, the heirs to the throne of Ethiopia were confined to mountain tops that were nearly inaccessible, (II) The mountains of Ethiopia used to be some of the most spectacular in the world. (III) This was to keep them from challenging their father or quarrelling with one another. (IV) Everything they wanted was provided, except freedom. (V) When the king died, one of them was selected as his successor.

A) I B) II C) III D) IV E) V

37- (I) The interior of the sun is like a hydrogen bomb of enormous size. (II) In it, hydrogen is changed into another gas called helium. (III) Hydrogen was once used in the great zeppelins, but as it was flammable and dangerous, it was later replaced by helium. (IV) As this change takes place, some matter is converted into energy, which radiates out into space. (V) Some of this energy reaches the earth in the form of heat, as you can discover for yourselves if you lie on the beach on a hot summer's day.

A) I B) II C) III D) IV E) V

38- (I) Carbon is one of the most important and valuable elements. (II) Pure carbon exists as diamonds and also as graphite, the "black lead" in pencils. (III) Minerals such as limestone contain carbon, as do fuels such as coal and oil. (IV) Oil is a form of petroleum, which is found underground between layers of rock. (V) A radioactive form of carbon, carbon-14, helps archaeologists determine the age of their findings.

A) I B) II C) III D) IV E) V

- 39- (I) The term "social mobility" refers to movement up or down the socio-economic ladder. (II) Social mobility can be measured by comparing an Individual's position to that of his or her parents, or by measuring the degree of success or failure experienced in a lifetime. (III) Children who attend expensive private schools generally have a better chance of success in life. (IV) Those who improve their living conditions are said to display upward mobility, for example, a college professor whose father was an auto mechanic. (V) Those who do not live as well as their parents did are said to display downward mobility, for example, a cleaner whose mother was a doctor.

A) I B) II C) III D) IV E) V

- 40- (I) Many people dispute the claim that Columbus discovered America and insist that that was done by a Viking explorer. (II) Before the discovery of America, there was a kind of insect that lived in the mountainous regions of the United States. (III) It fed on several different kinds of plants. (IV) When Europeans started planting crops, however, it changed its eating habits and began to live on the potato plant. (V) It is called the Colorado potato beetle because it was first noticed there.

A) I B) II C) III D) IV E) V

- 41- (I) Electric cars are often thought to be a new development, but there were battery-powered cars as early as 1898. (II) By the early 1900s, there were hundreds of electric cars and trucks on the roads of New York, Paris and London. (III) Though a solar-powered car has crossed Australia, it is not yet big or powerful enough to be practical. (IV) However, no electric car of the day could compete with the petrol engine for speed, acceleration, and most important of all, range. (V) The best of the electric vehicles could manage little more than 96 kilometres before its battery had to be recharged, and its top speed was no more than 48 kph.

A) I B) II C) III D) IV E) V

- 42- (I) Most people today think of Nike as a brand of sportswear. (II) However, the original Nike was known as the Greek goddess of victory. (III) Another Greek goddess, Iris, represented the rainbow. (IV) In legend, Nike was the daughter of Pallas and Styx, and she was generally portrayed as a winged goddess. (V) There is a sculpture representing her as such in the Louvre, in Paris.

A) I B) II C) III D) IV E) V

- 43- (I) There are lot of natural solutions to environmental problems. (II) High-tech methods are always the best. (III) For example, a farmer can grow rape seed in his fields and then make his own fuel by extracting the oil with a cheap press. (IV) After this extraction, the waste stalks and husks can be piled up, and microbes can be used to do the clean-up work, an old practice in Germany and other countries. (V) This process, known as composting, can convert organic wastes into fertilizer.

A) I B) II C) III D) IV E) V

- 44- (I) Radical change in Japan's modern history has come about only twice. (II) The first was in 1853, when Commodore Matthew Perry sailed his "Black Ships" into Tokyo Harbour and forced the country to abandon 250 years of isolation. (III) The second upheaval came about with the country's defeat in World War II. (IV) The policy of Isolation followed by the Chinese government led to similar sudden and traumatic changes. (V) In both cases, Japan would have been far better off, had it been able to change before being compelled to do so.

A) I B) II C) III D) IV E) V

- 45- (I) The Wampanoag are a tribe of Indians who originally inhabited 30 villages around Narragansett Bay. (II) Their chief at the time, Massasoit, welcomed the British and remained at peace with them until his death in 1661. (III) Because of the tribe's suffering, including epidemics of disease, however, his son waged a war against the settlers, which resulted in the virtual extermination of his tribe. (IV) Nevertheless, one village has retained its identity until the present day. (V) Similarly, the Picunche of South America are now extinct as an ethnic population, having been absorbed into Spanish colonial society.

A) I B) II C) III D) IV E) V

- 46- (I) Airways are bands of airspace 16 kilometres wide, along which commercial aircraft are separated from each other by air traffic controllers on the ground. (II) In the 1980s, American air traffic controllers attempted a strike, which resulted in the strikers losing their jobs. (III) On busy airways, such as those in western Europe, this separation is achieved using radar, which gives the controller a picture of all the aircraft in his area. (IV) With newer systems, the flight number and altitude of the aircraft are also displayed. (V) The controller is also in communication with his military counterpart to arrange clearance for military aircraft to cross the civilian airways clear of other craft.

A) I B) II C) III D) IV E) V

- 47- (I) The Earth, together with its satellite, the Moon, moves around the Sun at the rate of one complete circuit every 365 1/4 days. (II) It is because this period of rotation is not exactly 365 days that every four years we need to have a leap year of 366 days. (III) The Muslim world uses a lunar calendar for its religious festivals, which means they come about ten days earlier each year. (IV) The Earth also spins around on its axis, making one complete revolution every 24 hours. (V) This spinning causes our days and nights: half the Earth faces the Sun and receives daylight while the other half faces away and is in darkness.

A) I B) II C) III D) IV E) V

- 48- (I) Man's first true flight was achieved in a hot-air balloon, (II) The balloon was built in 1783 by two Frenchmen. (III) The first flight by a motor-driven aircraft was by Orville Wright in 1904. (IV) Recently, balloons have begun to fascinate people again. (V) In March, 1999, a British pilot named Brian Jones, and a Swiss doctor named Bertrand Piccard completed the first round-the-world trip in a balloon.

A) I B) II C) III D) IV E) V

- 49- (I) The man credited with developing the first vaccine to fight against the crippling disease polio is the American doctor Jonas Salk. (II) He and his co-workers first tested a polio vaccine against an inactive polio virus in 1952. (III) In 1954, field tests were conducted on a large scale. (IV) Consequently, a number of once deadly diseases have been conquered since the introduction of vaccination. (V) In the end, Salk's vaccine proved the best, and was used without further problems.

A) I B) II C) III D) IV E) V

- 50- (I) A frog which lives deep in the Amazon rain forest secretes a mucus used by Indians, who believe that it makes them better hunters. (II) Early findings illustrate that hunting is one of the oldest and most traditional activities known to man. (III) When a hunter wishes to use this "frog magic", another man burns the hunter's skin with a hot twig, mixes saliva with the mucus, and applies it to the burn. (IV) After this, the hunter becomes violently ill, then falls into an agitated sleep, only to wake up the next day eager to hunt. (V) Scientists are interested in this ancient custom as they believe that the mucus may contain a substance able to help treat some brain diseases.

A) I B) II C) III D) IV E) V

- 51- (I) Walia Ibex roam the steep slopes of Ethiopia's rugged mountains, (II) Legends trace their ancestry to the Near East, the species having migrated to the African continent thousands of years ago. (III) Therefore, most of the people of Ethiopia migrated to Africa from Southern Arabia over a thousand years ago. (IV) Today, a small population survives perilously on a mountain range surrounded by villages. (V) Despite protection within this area, which is a national park, agricultural intrusion and illegal hunting continue to threaten the Walia Ibex.

A) I B) II C) III D) IV E) V

- 52- (I) Deep in rural Dorset, on the edge of the Blackmoor Vale, stands Bulbarrow Hill. (II) Under its old name of Wessex, Dorset forms the setting of most writings of Thomas Hardy, a great Victorian era novelist. (III) It is a long walk to the top, but worth it, particularly on a sunny May morning when the English countryside takes on the sumptuous colours and vivid clarity of spring. (IV) From the summit, the whole of Britain seems to unfold before you as nothing but soft hills and small fields stretch away to a distant horizon. (V) It is a scene of rare beauty, and it is getting rarer.

A) I B) II C) III D) IV E) V

- 53- (I) Offshore areas considered part of South America include Easter Island, the Falkland Islands, the Galapagos Islands, and Tierra del Fuego. (II) In 1965, the English scientist Sir Edward Bullard used a computer to test the fit of Africa to South America. (III) He found that at a depth of 2000 metres, the fit was very close indeed. (IV) This is not the only evidence to suggest that Africa was once joined to South America. (V) For example, there is also a belt of ancient rocks along the coast of Brazil which corresponds with the rocks across the South Atlantic in West Africa.

A) I B) II C) III D) IV E) V

- 54- (I) No one really knows how many stars there are in the universe, but astronomers calculate that there must be about 100,000 million of them in our own galaxy, (II) in the universe as a whole, there may be as many as 10,000 million galaxies. (III) On this gigantic scale, the Earth is about as significant as a single grain of sand. (IV) Of course, no one really knows how many grains of sand there may be on a single beach. (V) This illustrates just how immense is the task of exploring even the merest fraction of outer space.

A) I B) II C) III D) IV E) V

- 55- (I) During the 19th century, factories in Manchester spun raw Indian cotton into cloth, then shipped it back to be sold in Indian bazaars. (II) Today Indian writers spin masterpieces from Britain's great export — the English language — and sell them to the West. (III) English is often the only common language shared by people from different parts of the world. (IV) One such masterpiece. Vikrem Seth's "A Suitable Boy", which is said to be the longest English language novel of the century, brought him a \$1 million advance from his Indian, British and American publishers. (V) Another example, the \$1 million advance Arundhati Roy received for "The God of Small Things" is thought to be the largest advance awarded a first-time novelist.

A) I B) II C) III D) IV E) V

- 56- (I) Television means literally "seeing at a distance". (II) Pictures and sound from all over the world can be seen and heard on a small screen in your own home. (III) There are far more channels today than anyone dreamed of just a few years ago. (IV) This is achieved by translating picture and sound information into ultra high frequency waves. (V) These can be transmitted, like radio, then re-translated into picture and sound through an electronic gadget: the television set.

A) I B) II C) III D) IV E) V

57- (I) In England in the 1800s, coal was found conveniently close to deposits of iron ore. (II) This made it comparatively easy and cheap to make large quantities of iron, burning the coal to melt down the ores. (III) Today matters are seldom so easy. (IV) The huge miners strikes of the 1980s came close to turning into a civil war. (V) Mining companies now have to spend a lot of money prospecting in inaccessible places.

A) I B) II C) III D) IV E) V

58- (I) Anti-war activists often target the big chemical producers for producing weapons like napalm. (II) For the big chemical companies making widely used chemicals, the main resource required is money committed to the company for an indefinite period. (III) This is why we call such an industry "capital intensive": it takes a lot of capital, or money, to build one of the huge plants required. (IV) They are so expensive to build that they have to be kept going 24 hours a day for 365 days a year. (V) That's why big chemical plants are likened to big cooking pots kept permanently bubbling.

A) I B) II C) III D) IV E) V

59- (I) Some companies have been able to grow big because of the "franchise system". (II) These companies find people who wish to operate, for example, a hotel or restaurant, and sell them the right to use the name of their larger company. (III) The individuals run their businesses according to set procedures written up in a big manual. (IV) It can be very risky to start a new business on your own in this economic depression. (V) They know that businesses managed according to these procedures tend to be successful because they benefit from advertising on a scale they could not afford themselves.

A) I B) II C) III D) IV E) V

60- (I) For two millennia, Jerusalem and the Holy Land have been a focus for pilgrimage and conflict. (II) Abraham, one of the earliest Hebrew prophets, actually came from what is today southern Turkey. (III) There have been many masters — Roman, Turkish, Egyptian, British and Jewish — and many religions have held sway over the land. (IV) Jerusalem was considered by many as the centre of the world, and its history is that of many cultures and countries. (V) Today it is no less venerated, and no less fought over, than in any other period of its history.

A) I B) II C) III D) IV E) V

61- (I) The Orient Express was one of the most elegant trains of all time, (II) At its peak, the blue and gold carriages had interiors that could have been from Victorian manor houses. (III) Ingrid Bergman received her third 'Oscar' for her role in 'Murder on the Orient Express'. (IV) Crystal chandeliers illuminated luxury dining cars. (V) Among the royal passengers were the kings of Bulgaria and Hungary, who used the train to travel to Queen Victoria's funeral in 1901.

A) I B) II C) III D) IV E) V

62- (I) The Romans developed a civilisation that formed the basis for modern Western civilisation, (II) The ancient Greek and Roman civilisations first formalised early forms of drama. (III) Greek theatres were open to the sky and set into hillsides. (IV) The audience, up to 16,000 sometimes, came from all sections of the community and were admitted free. (V) Actors wore ornate costumes and masks which enabled them to play several parts in one play.

A) I B) II C) III D) IV E) V

63- (I) Moving film does not in fact move at all. (II) It is made up of a series of still pictures, each one minutely different from its predecessor. (III) When these are projected onto a screen at a rate of 24 pictures every second, they give the impression of movement. (IV) Hollywood would never have become famous had it not been for the film industry. (V) A cine camera, therefore, is simply an ordinary camera adapted to take 24 pictures a second instead of one at a time.

A) I B) II C) III D) IV E) V

64- (I) However developed they are, all countries depend on one another to a greater or lesser extent and in different ways, (II) Some are rich in basic commodities like ores for iron, copper, lead, zinc and tin. (III) Others produce foodstuffs like sugar, coffee or tea. (IV) Most of these countries were colonised by European powers from the 17th through the early 20th centuries. (V) Therefore, they export the commodities they have and import the manufactured goods they want.

A) I B) II C) III D) IV E) V

65- (I) Five years ago, a little-known craftsman from the dusty back streets of southern China's Guangzhou city caught the world of classical musicians off guard, (II) Zhu Min-jiang was awarded a gold medal from the prestigious Violin Society of America for an instrument sculpted by hand in the tradition of Italian masters of the 17th century, (III) The proportions Antonio Stradivarius set for the violin are followed by most contemporary violin makers, but his violins have never been surpassed. (IV) This success took music critics by complete surprise. (V) For, although China was one of the world's biggest exporters of violins, its instruments were notorious for their inferiority, and sold by the truckload primarily because they were cheap.

A) I B) II C) III D) IV E) V

66- (I) So called "black holes" are still one of the great secrets of the universe. (II) The sun's family is also packed with moons, more than five dozen of them. (III) Increasingly, astronomers are appreciating that these moons may be far more remarkable than the planets they orbit. (IV) Unlike most of the planets, the moons have oceans, continents, and even active volcanoes. (V) And now, it seems, a moon may be the best place yet to look for the most remarkable thing of all: extraterrestrial life.

A) I B) II C) III D) IV E) V

67- (I) An argument often advanced on behalf of special classes for gifted children is that these children are held back in classes designed for the average child. (II) It is even thought that their intellectual growth may be permanently hindered, (III) There can be little doubt that special classes for the gifted can help them graduate earlier and take their place in life sooner. (IV) Mentally-retarded children also need special teaching and other support to help them learn and prepare for adulthood. (V) On the other hand, to take these students out of the regular classroom may create serious problems for them and for society.

A) I B) II C) III D) IV E) V

68- (I) Though foreigners are fascinated by the cultural aspects of suicide in Japan, the adult suicide rate is actually lower than in many countries. (II) Many child suicides are reported in Japan each year. (III) Some of them are even elementary school children. (IV) Research shows that most students who committed suicide were very calm, gentle, silent students. (V) In many cases, the reason for suicide seems to be linked to bullying of the victim by his or her peers.

A) I B) II C) III D) IV E) V

- 69- (I) When people eat more fat, sugar, starch and protein than they need for fuel, the extra is converted into fat and stored under the skin. (II) Women in many cultures worry about being too fat, while in others it is actually considered attractive. (III) When they are eating too little to keep their body nourished, they use up some of their own fat and become thinner. (IV) This "fat pad", which all people have to a greater or lesser degree, serves as a storehouse of fuel. (V) It also helps, like a blanket, to keep a person warm.

A) I B) II C) III D) IV E) V

- 70- (I) Human beings are inherently risk-taking creatures. (II) Most of our prehistoric, and even our historic, past was filled with danger and uncertainty. (III) The people who survived were those who thrived on risks. (IV) Thus, with the technology available today, most people seem to have lost this characteristic. (V) This is probably why in today's relatively safe world, people are developing such risky sports as bungee jumping and hang-gliding.

A) I B) II C) III D) IV E) V

- 71- (I) In theory, no one can see a Tomahawk Missile coming; in theory again, they are armed, dangerous and smart. (II) Their course is guided by global positioning satellite systems that can pin-point any moving object with an accuracy of 10 metres. (III) In practice, however, they are not 100% reliable. (IV) During the Persian Gulf War, of the 297 Tomahawks launched by US forces, nine never left the launch tubes, six fell straight into the sea, and at least two were shot down. (V) An amazing array of complex technology was brought into play at the start of the Persian Gulf War to assure a devastating air attack.

A) I B) II C) III D) IV E) V

- 72- (I) Parkinson's disease causes slow deterioration of the nerves' ability to control the muscles. (II) It usually starts with small tremors, then progresses to a strange walk and increasing weakness. (III) Alzheimer's disease, likewise, affects the memory. (IV) In 1997, researchers identified a long-sought gene defect that can cause a form of Parkinson's. (V) But the proportion of cases arising from the defect appears to account for no more than 10%.

A) I B) II C) III D) IV E) V

- 73- (I) Of all the weapons used by ground forces in modern warfare, tanks are probably the most formidable. (II) The tank, a British invention, first appeared on the battlefields of France during the First World War of 1914 to 1918. (III) It was intended to clear enemy trenches and help protect advancing infantry. (IV) It was also in World War 1 that airplanes made their first appearance in war. (V) These early tanks were slow, cumbersome, and armed with only light machine guns, although their sudden appearance demoralised the Germans.

A) I B) II C) III D) IV E) V

- 74- (I) Charles Babbage, a British mathematician, designed a machine in 1812 to calculate in decimal numbers which he called a "difference engine". (II) By this time another delicate instrument, the maritime chronometer, had already been perfected. (III) The mechanical construction was so delicate that he had to train workmen and design special tools to build the gears required. (IV) Unfortunately, because of a dispute, the machine was abandoned in 1842. (V) Babbage, however, went on to produce improved designs, and the last one, which he called an "analytical machine", was the ancestor of today's computers.

A) I B) II C) III D) IV E) V

75- (I) Blown out to sea by a hurricane, 15 iguanas survived the seas between two islands in the Caribbean. (II) There have been severe disasters caused by the hurricanes in the Caribbean. (III) A tree branch was all they had for a life raft. (IV) They were only trying to survive, but scientists have found their journey interesting. (V) Researchers say that the iguanas' cruise shows that land animals can migrate between islands through accidental voyages.

A) I B) II C) III D) IV E) V

76- (I) Since their introduction in schools in the early 1980s, computers and computer software have been increasingly accessible to students and teachers. (II) They are present in classrooms, computer labs, and school libraries. (III) By the mid-1990s there were about 4.5 million computers in elementary and secondary schools throughout the United States. (IV) Today, on average, students spend an hour per week using school computers. (V) Thanks to recent software, even a typical personal-computer can execute complicated graphics programs.

A) I B) II C) III D) IV E) V

77- (I) From the earliest days of television, teachers have looked for ways of using this seemingly marvellous educational instrument. (II) However, they have not been outstandingly successful. (III) It can't be denied that many television companies have devoted much time and thought to creating suitable programs for children. (IV) A lot of children benefit from television so much that they can read and write before they start school. (V) But still their programs, while containing much interesting material, are of little educational value.

A) I B) II C) III D) IV E) V

78- (I) In the early 1900s, an American engineer named Henry Ford founded a motor manufacturing company in Detroit. (II) Today, Detroit is still known as the centre of motor manufacturing. (III) His aim was to produce a light, fast car at the lowest possible price. (IV) Ford realised that to achieve this, his vehicle would have to be produced quickly and in large numbers. (V) Thus, he developed the idea of mass production.

A) I B) II C) III D) IV E) V

79- (I) The Gulf Stream, an ocean current in the Atlantic, has been called 'a river in the sea'. (II) The Atlantic Ocean, however, can be divided into five water layers, each of which supports a different type of marine life. (III) This is on account of its size and the speed of its flow. (IV) As an example, it carries out from the Gulf of Mexico at least 14 times as much water as is brought in by the giant Mississippi. (V) Not surprisingly, it is one of the largest and best known of all ocean currents in the world.

A) I B) II C) III D) IV E) V

80- (I) Venice declined in importance as a political power in the 1600s, but has remained a charming city. (II) The Rialto, the famous Renaissance bridge spanning the Grand Canal in Venice, was completed in 1591. (III) Antonio da Ponte's design consists of a single marble arch which is 24 feet high, with a 90-foot span and includes arcades containing shops. (IV) During its construction, 6,000 wooden stakes were driven to a depth of 11 ft to support this heavy marble arch in the soft Venetian soil. (V) The structure's name, the Rialto, was the original name of the area, the oldest quarter of Venice, where the bridge is located.

A) I B) II C) III D) IV E) V

81- (I) William Wordsworth was an English poet and a leading figure of the English Romantic movement in literature. (II) This movement was characterised by an emphasis on the individual, his emotions and imagination, and on the natural world. (III) Keats and Shelley are two other important English poets of the Romantic era. (IV) Following this style closely, Wordsworth himself took the unspoilt beauty of nature as his principal theme and inspiration. (V) Yet, one of his best-known poems is the sonnet Composed Upon Westminster Bridge, the bridge being situated in very unnatural surroundings, the centre of London.

A) I B) II C) III D) IV E) V

82- (I) Porcelain is a form of pottery which is arguably the best, and definitely the most expensive chinaware available. (II) It is translucent, which means a strong light shining near the plate can be seen through it. (III) The techniques for making porcelain were developed in China, where it was first made 3000 years ago. (IV) Consequently, the world's most famous porcelain factories are Spode and Wedgwood in England, Limoges in France, and Meissen in Germany. (V) By AD 700, this art had reached perfection there, although the techniques did not reach Europe until about AD 1500.

A) I B) II C) III D) IV E) V

83- (I) As long ago as the sixteenth century, it was known that light had a peculiar action on silver chloride. (II) It was also known that a small hole pierced in the darkened window of a room would admit rays of light to reproduce on a screen the views outside. (III) There are two main types of colour photography. (IV) The camera is a combination of these two principles. (V) W.H. Fox Talbot, Louis Daguerre and Joseph Niepce were three men who played an important part in its development during the nineteenth century.

A) I B) II C) III D) IV E) V

84- (I) The name Alexei Pyeshkov probably wouldn't mean much to most people. (II) However, this was the real name of the famous Russian writer, Maxim Gorky. (III) From 1932 until 1990 the city of Nizhny Novgorod was called Gorky, after the writer Maksim Gorky, who was born there. (IV) His assumed name means most bitter, which seems somehow suitable for the man who wrote with such realism about the extreme hardships of his early life. (V) Despite his harsh subject matter, (here is always a faith in man and his future evident in Gorky's work.

A) I B) II C) III D) IV E) V

85- (I) Though the Spaniards subdued and pacified the Indians from North America to Peru, the Araucanians continued to resist for three centuries, (II) It was not until after Chile achieved independence that they surrendered to the government. (III) Today, in the southern districts, there remain only about 50,000 Araucanians. (IV) People of pure Spanish descent total about 25 percent, while 66 percent are mestizo, a mixture of Spanish and native Indian. (V) Most of them are now Christian, but they are strongly attached to their old traditions.

A) I B) II C) III D) IV E) V

86- (I) Though Rasmus Rask was born to an uneducated peasant family in Denmark, he became a well-known scholar. (II) They owned a very small piece of land on which they grew mainly potatoes. (III) His talent lay in languages as he mastered several languages, including Icelandic, before he finished middle school. (IV) Upon finishing middle school, he travelled widely and gained firsthand experience of the more than 30 languages he spoke fluently. (V) One of the three most important linguists of his age, Rask wrote grammars of Icelandic, Anglo-Saxon, Frisian, Danish and Old Norse.

A) I B) II C) III D) IV E) V

- 87- (I) The world's biggest land animal, the elephant, evolved from the mammoth, which appeared millions of years ago. (II) The only survivor of a more primitive species, they once roamed in great herds over the whole of the northern hemisphere. (III) Aiding this research, well preserved fossils have been found in Alaska and Siberia. (IV) They were as large as most dinosaurs: CV) The mammoth became extinct at the end of the Ice Age, and its only descendants, modern elephants, settled in Africa and Asia.

A) I B) II C) III D) IV E) V

- 88- (I) One of the most useful materials in the world today is cement. (II) Portland cement, the kind which is used for making concrete, is manufactured from limestone, (III) First of all, the limestone is quarried and ground to a fine powder. (IV) In some places, farmers try to reduce the acidity of the soil by applying limestone to their fields. (V) After that, it is mixed with powdered clay, baked in a huge oven, then ground into the powder we are familiar with.

A) I B) II C) III D) IV E) V

- 89- (I) The prehistoric monument known as Stonehenge is situated on Salisbury Plain, north of Salisbury, England, and dates from the late Stone Age. (II) The monument itself consists of four concentric ranges of stones. (III) Grouped around the main structure are a number of barrows, some of which contain chips of a blue stone similar to that found in the concentric ranges. (IV) The purpose of this structure was a mystery for ages until an American astronomer determined that it could have been used to predict the positions of the sun and the moon, and thus serve as a sort of calendar. (V) The early Romans also used a calendar that was based on the moon, but the year in this calendar was 355 days long.

A) I B) II C) III D) IV E) V

- 90- (I) The first forms of life on the Earth grew in the sea, and, although today many plants and animals are able to live on land, they still need water. (II) The single most important substance in the human body and about two-thirds of the weight of it is water. (III) The other half is composed of a large variety of metals and other minerals. (IV) Thus, if you weigh 75 kilos, then about 50 kilos of your weight is the water in your body. (V) It is essential for life and you could not live for more than three or four days without it.

A) I B) II C) III D) IV E) V

- 91- (I) The usual way to have your distant vision tested is to stand twenty feet from a chart of different-sized letters, (II) For children or people who cannot read, charts with pictures are usually available, (III) A visual test can also be done with an instrument set up to simulate the same distance. (IV) Similarly, there are ways to test hearing over a distance. (V) Near vision is tested by having people read standard-sized type at a closer distance.

A) I B) II C) III D) IV E) V

- 92- (I) The Ryder Cup is the trophy awarded in biennial matches between men's professional golf teams of the United States and Europe. (II) The governing body of golf in the United States is the United States Professional Golfers' Association, which was founded in 1894. (III) The cup was donated in 1927 by British seed merchant Samuel Ryder, who had started playing golf at the age of 50. (IV) Made of 14-carat gold on a wooden base, the cup stands 16 inches high and weighs 4 pounds. (V) The figure at the top of the trophy is modelled on Ryder's coach, British professional golfer, Abe Mitchell.

A) I B) II C) III D) IV E) V

93- (I) The urge to travel is as old as civilization. (II) However, due to the huge amounts of money required, worldwide travel is mostly enjoyed by the citizens of developed countries, (III) The great historian Herodotus roamed the ancient world, examining the customs of many lands before writing his famous 'History'. (IV) Hundreds of years later, a young man from Venice named Marco Polo set out with his father for China, and his writings opened the Far East to Europeans of his time. (V) About the same time Ibn Battutah, an Islamic scholar, travelled about 75,000 miles and recorded his wanderings in the widely-read 'Rihlah', meaning 'Travels'.

A) I B) II C) III D) IV E) V

94- (I) Tennis elbow is an inflammation of the outside of the elbow caused by overstretching the joint, as in playing tennis, (II) This can also be caused by using the arm for unaccustomed activities, such as sawing, chopping or hammering, (III) When a ball strikes a fingertip, severe pain occurs immediately. (IV) The basic problem is that the forearm cannot stand the abnormal strain. (V) Each impact is absorbed by the elbow and may create inflammation.

A) I B) II C) III D) IV E) V

95- (I) I had seen a battle on the television that was being fought in a tropical rainforest, (II) I had never believed that the quiet streets I knew so well could change into a battlefield, (III) But now those formerly neutral streets were suddenly filled with a spirit of revenge and tension. (IV) I could never understand how the fighters themselves, whatever side they were on, could take aim and fire in these streets. (V) Were they all drugged like the leader of the gang. Ahmad?

A) I B) II C) III D) IV E) V

96- (I) Queen Christina brought foreign scholars to the palace, among whom was the philosopher Rene Descartes. (II) She demanded that Descartes came to instruct her at 5.00 a.m. three days a week, which he did, even though he was a late-riser, (III) Christina, on the other hand, rarely got out of bed before noon, and often slept through lunch. (IV) She questioned him about the interplay between science and religion. (V) He tried to persuade her that all animals were mechanisms and she responded that she had never seen a watch give birth.

A) I B) II C) III D) IV E) V

97- (I) Rice is thought to have originated in northern Thailand, where grains dating back to 3500 BC were discovered. (II) It reached Europe in the 9th century, and the Americas in 1694, by way of Madagascar, (III) Today, there are more than 40,000 varieties of rice produced in 95 countries. (IV) In Western countries, however, rice is used primarily in breakfast cereals, and as an alternative to potatoes. (V) As it's grown so extensively, it is no wonder that rice is the basic component of most meals for half the population of the world.

A) I B) II C) III D) IV E) V

98- (I) Fresh coffee stains and most old ones on washable fabrics can be removed by ordinary laundering with soap and water. (II) However, a slight trace sometimes persists in the case of heavy or old stains, (III) Drying the material in the sun will often remove these. (IV) If this fails, a bleaching agent may be used. (V) Some bleaching is done in the home, but the main use of bleach is in industry.

A) I B) II C) III D) IV E) V

99- (I) Radio transmissions are subject to interference of various kinds, (II) Radio waves travel outward in straight lines from the transmitting aerial and do not follow the curvature of the Earth. (III) It is often forgotten that the television was invented in England long before World War II. (IV) When Marconi sent the first radio signal across the north Atlantic, he was able to do so only because of an electrical reflecting layer in the atmosphere which bounced the radio waves back to the Earth. (V) This part of the upper atmosphere, known as the ionosphere, is made up of several layers of ionized gases with this property.

A) I B) II C) III D) IV E) V

100- (I) One of the largest airports in the world is the Dallas-Fort Worth complex in Texas, (II) Moreover, London's Heathrow Airport is probably the busiest in the world. (III) Because of the long distances that have to be covered by passengers inside the airport, the Americans have constructed a specially designed transport system called "Airtrans", which links the terminals with the various car parking areas. (IV) The Airtrans vehicles have rubber-tyred wheels which run along concrete guideways, and the coaches are all computer controlled. (V) The system can transport up to 9000 people, along with their baggage, per hour.

A) I B) II C) III D) IV E) V

101- (I) The cheapest way to transport goods long distances is by sea, but the quickest is by air. (II) The fastest container ships in the world have three huge propellers driven by three huge diesel engines. (III) When they are running at full speed, they gulp 300 tonnes of fuel per day, and thrust the ship through the seas at a speed of nearly 55 kph. (IV) If a vessel meets a similar ship travelling in the opposite direction, their passing speed is 110 kph. (V) This does not allow much time for either ship to take avoiding action if they find themselves on a collision course.

A) I B) II C) III D) IV E) V

102- (I) Guam is not a very large island. (II) Yet, one Japanese soldier managed to hide out in its jungles for 27 years without realising that World War II had ended. (III) Today Guam is best known in Japan as a holiday destination. (IV) During his years there, the resourceful Sergeant Yokoi made clothing from tree bark, and used the cycles of the moon for his calendar. (V) When he returned to Japan in 1972, he still had his old Imperial Army rifle, and he apologized for his "shame" in coming back alive.

A) I B) II C) III D) IV E) V

103- (I) For a man to gain 1 pound in weight by eating fish, it has been claimed that 1,110 pounds of living matter must die first. (II) This is because 1,000 pounds of plant plankton have to be eaten to produce 100 pounds of small creatures in the sea. (III) In the United States alone about 36.5 million fishing licences are issued each year. (IV) These in turn are eaten to produce 10 pounds of fish. (V) This is the amount of fish which a man would need to eat in order to gain that 1 pound in weight.

A) I B) II C) III D) IV E) V

104- (I) The modern Olympic Games have been held every four years since 1896. (II) The first competitive event held in the ancient Olympian and other Greek games was the short footrace, or sprint. (III) This was run over a single length of the stadium, a distance of approximately 200 metres. (IV) This race was called, appropriately, the stade. (V) For the first thirteen Olympiads, the stade was the sole athletic event staged in the stadium.

A) I B) II C) III D) IV E) V

105- (I) The Persians built the first windmills sometime in the 6th or 7th century A.D., for the purpose of powering irrigation pumps, (II) In some early large irrigation projects, mostly in arid and semiarid regions, little attention was paid to drainage, (III) Evolving over the years, by the eighteenth century, windmills were commonly used in Europe and America for grain-grinding and irrigation (IV) Along with waterpower, these provided the basic energy source for the Industrial Revolution. (V) In fact, two centuries ago, nearly every industrial process in existence ran on windpower.

A) I B) II C) III D) IV E) V

106- (I) The most obvious threat to the safety of your home is theft of its contents, (II) In fact, of all crimes committed today, crimes against property are the most common. (III) Needless to say, there are many more serious crimes, such as murder, which take up a great deal of police time. (IV) However, this does not have to be the case. (V) Many people simply make it too easy for > burglar, by not securing their homes adequately.

A) I B) II C) III D) IV E) V

107- (I) In 1066 the Norman invasion of England brought the tremendous impact of the French language to England, (II) For two centuries, French was the language of the English nobility, while English remained the language of the peasants. (III) English is now the principal language of twelve countries, and the official language in over a dozen more. (IV) It was only in the 14th century that English finally became the most important language in England, with the London dialect as standard. (V) However, as late as 1700, there were only 8.5 million English speakers.

A) I B) II C) III D) IV E) V

108- (I) In 1912 Edgar Rice Burroughs sold a story to All Star Magazine about an infant of English nobility who was abandoned in Africa and brought up by apes. (II) For this, Burroughs was paid the considerable sum of \$700 by the magazine. (III) Although Burroughs had little difficulty finding magazines to publish his numerous sequels, he received a number of rejections before finding a book publisher. (IV) These circumstances drove him to take up writing in order to attempt to support his family. (V) In fact, it was only in 1914 that his novel Tarzan and the Apes was finally published.

A) I B) II C) III D) IV E) V

109- (I) The Dutch have always been great seafarers — perhaps in part due to the unfavourable geography of the country itself. (II) Crowded into a small corner of Europe, most of Holland is naturally low, marshy land. (III) Land has been reclaimed from the sea through the use of dikes, types of dams, and has been transformed into fertile farm land. (IV) They have made up for this handicap not only by reclaiming land from the sea, but also by exploration and development abroad. (V) This brought great wealth to the country in the 17th century, the Golden Age of Holland, when the Dutch commanded the seas.

A) I B) II C) III D) IV E) V

110- (I) My favourite moment of the day comes before the sun is up, but conditions have to be right for it. (II) I usually wake up long after the sun has risen when my alarm goes off. (III) The weather has to be clear, and the lights lit in my room, and the sky outside still dark. (IV) Then I switch the lights off. (V) If I've timed it right, the sky will suddenly change to something else — a deep, transparent blue.

A) I B) II C) III D) IV E) V

111- (I) Hypnotism is a psychological method of inducing sleep or a suggestive state of mind achieved by getting the subject to concentrate on one object or idea, (II) Many people regard this practice with scepticism or fear. (III) However, there is nothing strange or abnormal about hypnotism. (IV) An early practitioner of hypnotism was Dr Franz Mesmer, from whom the term 'mesmerism' is derived. (V) For one thing, it cannot be imposed upon unwilling subjects and it can be a very effective treatment for certain nervous disorders.

A) I B) II C) III D) IV E) V

112- (I) The Industrial Revolution started in Britain in the eighteenth century, due to the development of steam power and the invention of certain machines. (II) Watt, Arkwright and Hargreaves were all important inventors in this period, (III) These innovations, coupled with the ability of British traders to create new markets abroad, turned Britain from an agricultural society to a predominantly industrialised one. (IV) However, although material prosperity increased, it was not evenly distributed among the citizens. (V) As a result, there was much hardship in the new industrial towns, which led to the creation of new political and labour movements.

A) I B) II C) III D) IV E) V

113- (I) Feminism, the movement for equal legal and social status for women, arose in response to the hardships that women had suffered over the centuries. (II) Apart from the short-lived gains of the French Revolution, women, well into the 1800s, had little or no right to hold property, to exercise authority over children or to vote. (III) The rise of democracy helped encourage women to fight for these rights. (IV) However, although many gains in legal, political and educational rights have been made, full social equality still has to be won. (V) As a result, today more women exercise political power in governments the world over.

A) I B) II C) III D) IV E) V

114- (I) Betsy Ross, one of a family of flagmakers, who lived from 1752 until 1836, has become very famous for something it is unlikely she did. (II) Her house in Pennsylvania is visited every year by thousands of American children who are brought there on educational trips, (III) The reason for this is that she is reputed to have both designed and made the first United States national flag. (IV) Today's flag has thirteen stripes and fifty stars, although the original one had thirteen of each — one for each state at that time. (V) However, it is almost certain the former claim is untrue and there is little evidence for the latter.

A) I B) II C) III D) IV E) V

115- (I) In spite of the success of the Viking space missions to Mars in the 1970s, they have not been followed up until the 1990s. (II) The mission had been the most ambitious ever sent to Mars. (III) Investigators concluded that a broken fuel line probably sent it spinning into space. (IV) The entire careers of some scientists had been based on that one project. (V) Its failure was such a crushing blow to them that they needed psychological counselling.

A) I B) II C) III D) IV E) V

116- (I) In 1900, life expectancy in the United States was 48, as opposed to 75, today. (II) In a few African and Asian countries, it is still this low. (III) Much of this gain came in the first half of the century, before many of the big research breakthroughs, including antibiotics. (IV) The main reason was vast improvements in public health: clean water, and especially an understanding of the importance of sanitation during childbirth. (V) Today, women in the West are only about one-tenth as likely to die while giving birth as they were at the turn of the century.

A) I B) II C) III D) IV E) V

117- (I) In the plain of the Ganges in southern Nepal, there is a fascinating nomadic tribe living in perfect harmony with nature. (II) Known as the "bee people", the Rajis survive by harvesting wild honey and by fishing. (III) Their way of life seems to have remained unchanged for centuries. (IV) They are a big attraction for tourists and have built a high tech visitor's centre to show off their modern way of life. (V) Yet the vast forest that once covered this part of Nepal is disappearing, and the future of this remarkable people is very much in jeopardy.

A) I B) II C) III D) IV E) V

118- (I) Like the Sphinx's beard and the Elgin Marbles, the art of the Sikh kingdoms was stolen by the greedy British, (II) No sooner had the East India Company claimed the Punjab area in 1849 than it was sending home crates full of silver armour, gilded manuscripts, and priceless miniature paintings, (III) Many of the manuscripts and miniature paintings left in India are kept in very poor conditions. (IV) They stole the Sikh throne for the Victoria and Albert Museum. (V) Practically the only thing they left intact was the Sikhs' most important religious place, the Golden Temple.

A) I B) II C) III D) IV E) V

119- (I) Today the American chestnut has been almost wiped out by the chestnut blight, a fungal disease first observed in 1904. (II) Apparently it was introduced from Asia, (III) Native to the temperate zone of the Northern Hemisphere, there are eleven species of chestnuts. (IV) The organism was mild in its native realm. (V) But it proved to be deadly in the bark of the American chestnut.

A) I B) II C) III D) IV E) V

120- (I) The great improvement in health care is no longer confined only to the more advanced nations of the world, thanks to the World Health Organization, WHO, a specialist agency of the UN. (II) UNICEF and UNESCO are other UN organizations with different objectives. (III) WHO was established in f 948 to bring "the highest possible level of health" to all peoples. (IV) In order to accomplish this, WHO has a number of main objectives. (V) It provides a central clearing house for research services into medicine, and it has established a set of agreed rules for dealing with epidemics and the quarantine regulations.

A) I B) II C) III D) IV E) V

121- (I) The South .Asian Women's Centre in Montreal, Canada, was started by an Indian lady in her kitchen. (II) Now it is a thriving community centre, which helps immigrants from India, Pakistan, Nepal and Bangladesh by offering them a social centre, education opportunities and legal advice. (III) Everything printed in the centre is in seven languages, five Asian languages in addition to English and French. (IV) The Tamils in the North of Sri Lanka are predominantly Hindu, whereas the Sinhalese in the South are traditionally Buddhist. (V) The topic of religion is banned from the centre as, although all of them are South Asian, the women come from diverse ethnic and religious backgrounds.

A) I B) II C) III D) IV E) V

122- (I) Certain types of anti-aircraft missiles are radar-guided to their target. (II) Radar has numerous nonmilitary applications as well, especially in navigation. (III) This is an automatic system with two radar beams, one beam to track the target and the other to track the missile. (IV) Information from the reflected beams is fed into a computer. (V) The resulting calculation sets the missile on a deliberate collision course with the target.

A) I B) II C) III D) IV E) V

123- (I) During the reign of Elizabeth I, Sir Walter Raleigh was in good standing with British royalty, (II) He was responsible for introducing potatoes and tobacco to the English. (III) However, upon the accession of James I, he fell from favour and was condemned to death for treason. (IV) Later, the new king set him free to let him redeem himself by finding the fabled city of El Dorado and return with its riches. (V) When he returned to England without the treasure, the king had him put to death.

A) I B) II C) III D) IV E) V

124- (I) The 400,000 inhabitants of Macao, the tiny Portuguese colony soon to be handed back to China, have traditionally supported whatever regime was in power in China, (II) Since serious riots during the Cultural Revolution, Macao has been careful not to do anything to upset the Chinese authorities. (III) Chinese students upset the authorities in 1989 by demanding an end to corruption and by calling for political reforms. (IV) There have been none of the political rows in Macao that marked the last five years of British rule in Hong Kong. (V) And unlike Britain's policy towards Hong Kong, 100,000 people of Macao are classed as Portuguese citizens and so have the freedom of movement throughout Europe.

A) I B) II C) III D) IV E) V

125- (I) It's so fascinating to see children play with their pet dogs. (II) Children sometimes use play situations to express their most pressing needs and to satisfy them. (III) A child who feels the need for attention may play at being a dog. (IV) With barks and on all fours, the "dog" joins other playmates, who greet it by patting its head and hugging it as they would their own pets. (V) In this way, the child gains desired attention and affection from others.

A) I B) II C) III D) IV E) V

126- (I) In the 1960s, the Beatles and other young rock groups brought the culture of Britain to the notice of the world. (II) For young British talent, the 1990s have been explosive. (III) British style and attitudes now permeate Parisian couture, global advertising, even American pop radio. (IV) From rave culture to the pages of youth magazines, British creativity has been a power-house for the decade. (V) Where all this energy came from, and why it's happening now remain unanswered.

A) I B) II C) III D) IV E) V

127- (I) Queen Elizabeth I of England was completely bald. (II) She lost her hair after suffering from smallpox at the age of 29. (III) This terrible disease was the cause of much loss of life in England, until a vaccine was invented in 1796. (IV) To disguise her loss, she always wore a wig. (V) Thus a vogue for wigs was created in Europe, which lasted several hundred years.

A) I B) II C) III D) IV E) V

128- (I) Buddhism is a Western word, and in the East, this religion is known as the Buddha-Dharma, or the teachings of the Buddha, (II) Shinto is one of the major religions of Japan. (III) The word means 'way of the gods', and the basic Shinto belief is that the gods were ancestors of the Japanese people. (IV) At one time, this led to the cult of ancestor worship among individual families, and to a belief in the divinity of the emperor. (V) This latter aspect of the religion was abandoned in 1946.

A) I B) II C) III D) IV E) V

129- (I) Mathematics is pervasive throughout modern life, for even baking a cake or building a house involves the use of numbers, geometry, measures and space. (II) Algebra is a branch of mathematics by which unknown quantities are deduced from known quantities. (III) The general method of algebra is to present known and unknown quantities as parts of an equation. (IV) The latter may be defined as a mathematical statement of balance or equality. (V) The unknown quantities are then isolated by mathematical procedures which will reveal their value.

A) I B) II C) III D) IV E) V

130- (I) Wind velocity is measured on an "anemometer, (II) The most common kind is the three-cup anemometer. (III) The wind is caught in the hollows of the cups, causing them to rotate. (IV) The Beaufort symbol is the symbol used on weather maps to indicate wind direction and velocity. (V) The speed of the rotation, measured in miles per hour, is the speed of the wind.

A) I B) II C) III D) IV E) V

131- (I) Radar is a system involving the transmission and reflection of radio waves. (II) It was developed by a team of British scientists led by Robert Watson-Watt before World War II. (III) In 1940, the German Luftwaffe attempted to destroy the Royal Air Force and to bomb England in what is known as the Battle of Britain. (IV) The system was first used during the Battle of Britain to locate the approach of enemy aircraft. (V) Today it has been adapted for navigational use by aircraft and ships, and can also give warning of approaching storms.

A) I B) II C) III D) IV E) V

132- (I) The first census in England, although not called by that name, was William the Conqueror's survey of the country's people and their property in 1085. (II) The information which was gathered was entered in the Domesday Book. (III) William's object seems to have been chiefly to ascertain how much tax he could levy, and for this reason the survey was greatly resented. (IV) Nevertheless, this book provides the historian with a unique record of social conditions in 11th century England. (V) As expected, since then, the British tax system has been changed many times.

A) I B) II C) III D) IV E) V

133- (I) Contrary to what many people think, exercise actually gives you more rather than less energy, (II) Regular conditioning exercises such as jogging, cycling or swimming, help you to resist fatigue. (III) It does this by increasing your body's ability to handle more of a work load. (IV) Eating a lot of fresh fruit and vegetables also increases your energy level. (V) You get tired less quickly because your capability is greater.

A) I B) II C) III D) IV E) V

134- (I) Remedies for stomach aches have a long history, (II) A first-century A.D. Roman advised people with colds to kiss the hairy nose of a mouse, (III) Sixteen hundred years later American colonists fought off colds by stuffing dirty socks with salted pork and onion, then wrapping them around their necks. (IV) Though today's remedies smell better, they are no more successful at curing the common cold. (V) However, they are an improvement over the old methods and can relieve some of the symptoms.

A) I B) II C) III D) IV E) V

135- (I) Charles Dickens was an English novelist who lived from 1812 to 1870. (II) His novel Oliver Twist portrays a poor orphan by the same name. (III) As a boy, he lived close to the poverty line, but later became rich and famous. (IV) However, during his childhood, he had developed a sense of social justice that lived on in his novels. (V) In these novels, he created some of the most famous characters in English literature.

A) I B) II C) III D) IV E) V

136- (I) Many people have an almost irrational fear of cockroaches, (II) True, these insects are unusually ugly. (III) A character in a well-known Japanese novel keeps cockroaches as pets in a matchbox. (IV) Large, dark brown, with long black feelers sticking out from its head, always moving and twitching, a cockroach has a disgusting look about it. (V) And because they come out at night, they reinforce our natural fear of the dark.

A) I B) II C) III D) IV E) V

137- (I) According to the well-known science-fiction writer Isaac Asimov, slavery and serfdom have been natural stages of mankind's history, (II) He feels that the abolition of slavery came not so much from idealists and reformers, but from scientists, (III) Throughout the nineteenth century, the anti-slavery movement in Britain gradually changed the public's attitude to slavery. (IV) It was science that gave us steam power, electricity, and radio beams to do the work that previously been done only by human muscle. (V) Without these advances, he argues, wealth and prosperity would still be limited to the few, while the many would be chained to lives of animal-like labour.

A) I B) II C) III D) IV E) V

138- (I) The House of Lords is one of the two houses of the British Parliament. (II) About half of the Lords earned their titles for services to their country or their party, (III) But the other half are there because they inherited their titles. (IV) The House of Lords has little real power, but it can slow down the work of the House of Commons. (V) Parliament annually approves allowances for members of the royal family as well.

A) I B) II C) III D) IV E) V

139- (I) A person's dialects depend on where he lives, what groups he moves with, his education, and so on. (II) A Tokyo engineer from Kyoto, for instance, might use his own Kyoto dialect at home, but the standard dialect of Tokyo at work. (III) His speech would differ in some ways from that of his wife and that of his teenage son. (IV) With other engineers he would use a kind of engineering shop talk. (V) Thus, in a society, different styles of speech are used to show degrees of politeness.

A) I B) II C) III D) IV E) V

140- (I) A river starts as a tiny trickle, or rill, on a slope. (II) Rainfall, snowfall, a spring or the melting of glacial ice may be its source. (III) As it flows downhill, it is joined by other trickles to make a brook, and other brooks add their waters to form a stream, which broadens into a creek. (IV) To get the greatest benefit from a river, however, people alter its course through engineering projects. (V) As the water continues its downward journey, it gains in volume and finally becomes a river.

A) I B) II C) III D) IV E) V

141- (I) Some physicians say that a person who is able to function reasonably well is mentally healthy. (II) Others hold that a person is mentally healthy if his behaviour is like that of the majority of people. (III) There are, of course, people in a society who stand out from others in the way they speak, dress, and so on. (IV) Still others make comparisons with an ideal. (V) According to these physicians, mental healthfulness may be approached but not attained.

A) I B) II C) III D) IV E) V

142- (I) In the Kathmandu Valley of Nepal the ancient custom of worshipping a young girl as a goddess has survived to the present day. (II) Kathmandu is such a tolerant place that Hindus and Buddhists often share the same temples, worshipping the same images under different names. (III) Every day people come to worship her and to ask her for help with their problems. (IV) Though a tutor comes to give her basic schooling, she is only allowed out of her temple on five festival days, and then she is surrounded by worshippers. (V) Her reign as a goddess ends with the onset of puberty, when a new girl of about six is chosen.

A) I B) II C) III D) IV E) V

143- (I) The drink we know as "tea" is brewed and drunk in so many different ways that it can be difficult to believe that they all originate from the same plant. (II) In Turkey and other parts of the Middle East, the leaves are stewed for a long time and then it is drunk with sugar, but no milk. (III) Most English tea is still imported from its former colony, India. (IV) In some places, it is actually brewed in hot milk, often with spices such as cardamom or ginger. (V) Tea in China is a pale, weak beverage drunk with no additives, while in Japan it is green.

A) I B) II C) III D) IV E) V

144- (I) The origin of the turkey's name is uncertain. (II) Some believe the name comes from one of its calls, a soffturk, turk, turk." (III) Others believe that the bird was originally confused with the guinea cock, which was imported into Europe from Africa through Turkey. (IV) Still others suggest that the head of the bird resembles a Turkish fez. (V) The fez was named after the Moroccan city of Fez, outside of which grow red berries whose dye was once exclusively used to colour hats.

A) I B) II C) III D) IV E) V

145- (I) One of the strangest, yet most influential art movements of the early 20th century was called Dadaism. (II) Dadaism arose in 1916 as a protest to the mechanized slaughter of World War I. (III) Historians call World War I the last war to be fought between imperial dynasties. (IV) This movement was directly succeeded by Surrealism. (V) Today we can see its influence in such artistic phenomena as "installation art".

A) I B) II C) III D) IV E) V

146- (I) The llama is a humpless South American relative of the camel, resembling a large sheep with a long neck, (II) It was first domesticated by the ancient Peruvians and probably descended from the wild guanaco. (III) Like the llama, all domestic animals have wild ancestors, (IV) It is used for carrying loads, but refuses to move if loaded much above thirty pounds. (V) It has several relatives, like the alpaca, which yields a finer wool, and the entirely wild vicuna, which is prized for its silky fleece.

A) I B) II C) III D) IV E) V

147- (I) Writing poetry requires no complicated equipment, simply pencil, paper and a block of quiet time, (II) The fading popularity of poetry as an art form is unfounded. (III) Poetry is neither boring nor disconnected from everyday existence, as some critics foolishly claim. (IV) On the contrary, poetry can disclose impressions, images and dimensions of the human experience that other art forms are unable to convey. (V) Yet, at the same time, it possesses a wonderful simplicity on multiple levels and tastes.

A) I B) II C) III D) IV E) V

148- (I) The Copts are a group of Egyptian Christians, (II) They are direct descendants of the ancient Egyptians and today make up about a tenth of the country's population. (III) The Coptic language was used by common people from 300 to 700 A.D. (IV) The Roman Catholics, too, used a dead language, Latin, until 1963. (V) Today, it is only used in the Coptic Church, which split off from the main body of Christianity over theological disputes centuries ago.

A) I B) II C) III D) IV E) V

- 149- (I) The concept of winter in European countries is associated with the season of dormancy, (II) Some plants die, leaving their seeds, and others merely cease growth until spring. (III) The cold weather, of course, effects the most northerly nations more profoundly. (IV) Many animals also become dormant, especially those that hibernate. (V) Even people seem less active.

A) I B) II C) III D) IV E) V

- 150- (I) People have inhabited this planet for a long time, (II) Man's subjective experience of time is often relative, (III) Because of this, eventful periods appear shorter than equally long but uneventful periods. (IV) The measurement of the passage of time, however, can be done objectively. (V) This can be accomplished by many methods involving various devices, such as clocks or sundials.

A) I B) II C) III D) IV E) V
