- A) that you hadn't come to the party
- B) that you will finish your work
- C) whether you would need to be there
- D) why you didn't go out
- E) you wouldn't be going there again

## SÖZCÜK BİLGİSİ – KONU 3

### ACUTE, ALLERGY, BACKACHE, DISEASES, DRUGS, FEVER, HEALTH, ILLNESSES, INFECTIOUS, PAIN, PNEUMONIA, SWELLING, SYMPTOMS, TREATING

Disease is any state in which the health of the human organism is **impaired**. All diseases involve a **breakdown** of the body's natural defence systems or those regulating the internal environment. Understanding of diseases depends on a clear **delineation** of the symptoms, which are **manifestations** of **altered** life processes. Symptoms may range from subjective reports of pain, such as headache or backache, to visible conditions, such as a swelling or a rash. Common symptoms include changes in body temperature (such as fever), fatigue, loss or gain of weight, and pain or **tenderness** of muscles or internal organs. Further examination may **reveal**: the presence of infectious organisms; broken bones; changes in the composition of blood cells; and cancerous growth.

The classification-by-cause approach to diseases arose from the study of infectious diseases, which were among the first illnesses to be understood. Examples include: pneumonia, cholera, and gonorrhoea, caused by bacteria; and smallpox, measles, and hepatitis, caused by viruses. More recently, occupational **exposure** to fine powders and some organic chemicals has been found to produce allergy.

Smoking cigarettes, drinking alcohol **excessively**, overeating or not exercising, and/or living in a state of constant stress are all now considered to predispose one to illness. The relationship between eating a high-fat diet and having a heart attack, is even more complicated than the process by which infection causes symptoms.

Many conditions considered to be personality **disorders** are now known to have biochemical **components**. The success of some drugs in treating mental disorders has promoted the idea that these disorders may not always be behavioural problems, but signs of abnormal functioning of parts of the brain.

## SÖZCÜK BİLGİSİ – KONU 4

### 1. BURIAL, DECEASED, EMBALM, FUNERAL, GRAVE, GRIEVE, MONUMENT, MOURN, TOMB

Burial is **disposal** of a corpse in a **tomb** or **grave**. Burial may also take place at sea, the corpse being released into the water from over the side of a vessel, or may take the form of exposure of the body to the elements, as is the custom of the Inuit peoples of the Arctic and subarctic regions. The ashes left after cremation of the body can be **buried** if desired. The burial is preceded by and accompanies various **funeral** rites and customs, such as **embalming**. The purpose of embalming in modern Western society is to prevent **mourners** from having to **confront** the processes of putrefaction. Funeral rites and customs are concerned not only with the preparation and disposal of the body, but also with the well-being of the survivors and with the **persistence** of the spirit or memory of the **deceased**. Even the **emotions** exhibited during death rituals can be **dictated** by **tradition**. Mourners who are unrelated to the **deceased** may be **hired** to **wail** and **grieve**.

- |                |                           |

| 8. hire        | h) inter, entomb, embed   |
| 9. wail        | i) moan, weep loudly      |

### 2. AUNT, BRIDE, GROOM, HOSTILE, HUMAN, INDIVIDUALISM, MALE, MARRIAGE, NEPHEW, NIECE, PARENT, PARTNER, POLYGAMY, WEDDING, WIDOW

Marriage is a social institution (usually legally **ratified**) uniting a man and a woman in special forms of mutual dependence, often for the purpose of founding and maintaining a family. **Marriage** as a contract between a man and a woman has existed since ancient times. Monogamy, the union of one man and one woman, is thought to be the prototype of **human** marriage and its most widely accepted form, **predominating** also in societies in which other forms of marriage are accepted. All other forms of marriage are generally classed under **polygamy**, in which one man has several wives or one woman has several husbands. Polygamy sometimes results in the maintenance of separate households for each wife, although more frequently the shared-household system is employed, as with Muslims and among many Native American **tribes** before the colonization of North America.

Most marriages are **preceded** by a betrothal period, during which various rituals, such as exchanges of **gifts** and visits, lead to the final **wedding** ceremony and make the claims of the **partners** public. In societies where arranged marriages still predominate, families may **negotiate** a **dowry**, future living arrangements, and other important matters before marriage can be arranged. Most wedding ceremonies involve rituals and symbolism that reflect the desire for fertility, such as the **sprinkling** of the bridal couple with rice or the **bride's** **adornment** with orange blossom. In some societies fear of **hostile** spirits leads bridal couples to wear disguises at their weddings or sometimes even to send **substitutes** to the ceremony.

Fear of incest is a universal **restriction** to the freedom of marriage, although definitions of incest have varied greatly throughout history. In most cases, the prohibition **extends** to mother and son, father and daughter, and all offspring of the same **parents**. Among certain groups, however, such as ancient Egyptian royalty, marriages between brothers and sisters were in fact **decreed** by the prevailing religion. In many societies, taboos are broadened to include marriages between uncles and

nieces, aunts and nephews, first cousins, and, occasionally, second cousins. The traditional importance of marriage can also be observed in the customs surrounding widows and widowers, such as waiting times prescribed before remarriage, the wearing of mourning clothes, and the performance of ceremonial duties owed to the dead.

Most societies have allowed for some form of **divorce**, except those dominated by religions such as Hinduism and Roman Catholicism that regard marriage as indissoluble. The most frequently accepted **grounds** for divorce have been **infertility**, **infidelity**, criminality, and insanity.

The institution of marriage has **altered** fundamentally in Western societies as a result of social changes brought about by the Reformation, the Industrial Revolution, and a growing ideology of individualism. Arranged marriages, which had been accepted almost everywhere throughout history, eventually **ceased** to predominate in Western societies. One of the most extreme applications of the custom of arranged marriages was in pre-revolutionary China, where it was often the case that a bride and groom met for the first time only on their wedding day. Also significant have been the legalization of **abortion**, the improvement and increased accessibility of birth control, the removal of legal and social handicaps for children of unmarried people, and changes in the accepted concepts of male and female roles in society.
