GENEL TEKRAR

ALIŞTIRMA 1

1. --- cooks are equally proficient in the profession, and --- will be most pleased to help you with your cooking problems.

- A) A few/most
- B) Both/either
- C) Each/every
- D) Many/all
- E) Most/no

2. --- driver is obliged to wear the seat belt while driving, but only --- who have common sense do so.

- A) All/that
- B) Any/others
- C) Each/one
- D) Either/those
- E) Every/those

3. --- less money --- expected was collected during the charity affair.

- A) Far/than
- B) Much/as
- C) So/that
- D) Such/as
- E) Too/for

4. Had the rescue team not arrived on time, we --- a single person.

- A) didn't use to save
- B) hadn't had to save
- C) won't have been saving
- D) won't have had to save
- E) wouldn't have been able to save

5. --- attract more customers, some major shops issue their own credit cards.

- A) Because
- B) In order to
- C) Once
- D) Thanks to
- E) Too soon

6. --- had we completed the final draft when the project director announced that the project had been cancelled.

- A) Once
- B) Only if
- C) Owing to
- D) Scarcely
- E) The moment

7. --- had I finished writing my essay than I realised that I had been writing on a trivial issue.

- A) Afterwards
- B) No matter
- C) No sooner
- D) Not until
- E) Once

8. --- he had won two successive elections, he was ready to implement his own policies in his party.

- A) Nevertheless
- B) No sooner
- C) Once
- D) Unless
- E) Yet

9. --- some petrol station owners tend to degrade the quality of the petrol they sell, I am always having problems with my car.

- A) Because
- B) For
- C) However
- D) Thus
- E) Whereas

10. Had the witnesses helped the police in their investigation in the first place, the murdered --- yet another woman.

- A) didn't kill
- B) might not kill
- C) wasn't killing
- D) won't be killing
- E) wouldn't have killed

11. --- her studies at university, Jane is attending evening classes to learn French.

- A) Despite
- B) In addition to
- C) In contrast to
- D) Instead of
- E) Since

12. --- he is a very careful writer, he still makes mistakes in the plot of his scenarios.

- A) Even though
- B) However
- C) No matter
- D) So much
- E) The more

13. An accountant should keep all --- books in a very neat style and produce accurate copies of ---.

- A) him/it
- B) himself/itself
- C) his/them
- D) their/its
- E) them/theirs

14. Although the law requires that teenagers --- cigarettes and alcohol drinks, this rule --- strictly by owners of smaller shops.

- A) can't buy/isn't applied
- B) don't buy/isn't applying
- C) might not buy/hasn't applied
- D) must not buy/didn't apply
- E) needn't buy/shouldn't be applied

15. --- of the rescue workers reached the area soon after the devastation, but --- failed to do so due to various reasons.

- A) All/any
- B) Each/lots of
- C) Most/a few
- D) Much/a little
- E) Some/much

16. --- of the applicants --- in their CV in English.

- A) A few/had to hand
- B) A few/is handing
- C) Each/has to hand
- D) One/are going to hand
- E) Some/has handed

17.--- in this company can you find a more relaxing place than our cafeteria, where people can eat and drink --- they want.

- A) Anywhere/anything
- B) Elsewhere/something
- C) Everywhere/everything
- D) Nowhere/anything
- E) Somewhere/anything

18.Before Soviet Russia sent Yuri Gagarin to space, --- countries had dreamt of manned flight to space but --- had had different technical or financial problems.

- A) a lot of/both
- B) every/either
- C) most/few
- D) plenty/each
- E) several/all

19.--- I do to avoid him, he follows me --- I go.

- A) However/whichever
- B) Whatever/wherever
- C) Wherever/whomever
- D) Whichever/whatever
- E) Whoever/whenever

20.--- a very experienced teacher can control this class!

- A) No matter
- B) Nonetheless
- C) Not even
- D) Whether
- E) Without

21.--- the electric bulb was invented, the daily routine went from dawn till dusk.

- A) Before
- B) Despite
- C) Owing to
- D) Since
- E) Therefore

22.--- intensive industrialization efforts of a decade ago, our seas nor suffer from large scale pollution.

- A) As a result of
- B) Furthermore
- C) In contrast to
- D) In order to
- E) In spite of

23.--- the town council decided that the old school building should be rebuilt, they now find it difficult to raise enough money.

- A) Although
- B) As
- C) Because
- D) Despite
- E) However

24.--- the fact that it was one of the biggest earthquakes ever recorded, not a single person was killed.

- A) Despite
- B) Due to
- C) However
- D) In case
- E) So that

25.--- his having attended first aid courses earlier on, survivors of the car accident received on-the-spot treatment.

- A) Despite
- B) However
- C) In order that
- D) Since
- E) Thanks to

26.--- a high rate of inflation coupled with equally high levels of unemployment, many foreign enterprises have left the country.

- A) As a result
- B) As long as
- C) in addition
- D) On account of
- E) On the other hand

27.--- we finally arrived at the football stadium, supporters of the opponent team were already there.

- A) By the time
- B) Afterwards
- C) Beforehand
- D) So that
- E) Until

28.--- receiving signals from base stations, a mobile phone sends messages as well.

- A) However
- B) In addition to
- C) Instead of
- D) Moreover
- E) Whenever

29.--- looks drunk in this party and there seems to be --- else I can go!

- A) Anybody/anywhere
- B) Anyone/everywhere
- C) Everybody/nowhere
- D) No-one/somewhere
- E) Somebody/elsewhere

30.--- he'd got used to the school, the small boy showed great progress.

- A) By the time
- B) Due to
- C) In case
- D) Once
- E) While

ALIŞTIRMA 2

1. --- you look in his house, there is a piece of antique furniture.

- A) However
- B) Whatever
- C) Whenever
- D) Wherever
- E) Whoever

2. --- gravely during the battle, the commanding officer tried not --- his consciousness.

- A) Being wounded/having lost
- B) Having wounded/lose
- C) To wound/to have lost
- D) Wounded/losing
- E) Wounded/to lose

3. --- we begged to participate in the annual union meeting reacted strongly, saying that the union was of no use at all.

- A) However
- B) Whatever
- C) Whenever
- D) Wherever
- E) Whomever

4. --- I really love about my flat is that I have a breath-taking view of the mountains.

- A) How
- B) That
- C) What
- D) Where
- E) Why

5. The famous seventeenth century Dutch artist Vermeer's 21 paintings that --- by his butcher in return for his debts after his death --- in the National Museum.

- A) are bought/are exhibited
- B) bought/exhibited
- C) could buy/can be exhibited
- D) had bought/are to be exhibited
- E) were bought/will be exhibited

6. A saw is special tool --- main function is to cut wood.

- A) that
- B) where
- C) which
- D) whom
- E) whose

7. --- in service in 1976, the first supersonic passenger plane, Concorde, --- its final flight in November 2003.

- A) Having been put/made
- B) Having put/made
- C) Putting/made
- D) Putting/had been made
- E) To have put/had made

8. After we had landed the small island, inhabitants there invited us to --- small village and told us to help --- with their delicious food.

- A) ourselves/us
- B) their/ourselves
- C) them/our
- D) themselves/we
- E) they/us

9. In the --- battle field, there is not --- single spot without a dead body on it.

- A) all/one
- B) each/every
- C) most/any
- D) some/much
- E) whole/a

10. As we travelled across the Gobi Desert on camel back, we kept thinking --- we would ever reach the other side of this ocean of sand.

- A) when
- B) where
- C) whether
- D) which
- E) why

11. It initially looked as if the two countries --- into a war, but, thanks to diplomatic efforts, a possibility as such --- in time.

- A) are entering/has been avoided
- B) had entered/would be avoiding
- C) have entered/could have avoided
- D) were going to enter/was avoided
- E) will have entered/has avoided

12. Unaware that he --- by his wife, Tom --- out to water his garden in his pyjamas!

- A) had been observing/went
- B) has observed/has gone
- C) observed/will have gone
- D) was being observed/went
- E) was observing/should have gone

13. Having a strategic position in --- whole mid-Mediterranean region, the island of Malta became one of --- most important sea base for pirates in history.

- A) a/a
- B) a/the
- C) some/a
- D) the/a
- E) the/the

14. Because we did not have --- information about the causes of the revolt, --- of us believed that it was a simple uprising.

- A) any/every
- B) enough/many
- C) many/many
- D) same/each
- E) too much/plenty

15. By the time she --- , my aunt --- at Marks & Spencer for over forty years.

- A) has retired/had been working
- B) is retiring/has been working
- C) retired/was working
- D) retires/will have been working
- E) will retire/will be working

16. Using watercolours for painting is probably --- than working oil colours.

- A) by far the easiest
- B) far too easy
- C) much more easily
- D) so much easier
- E) the most easily

17. Contrary to expectations, jobs related with social topics are among --- growing employment segments.

- A) as rapidly as
- B) more rapid than
- C) rapid enough
- D) so rapidly that
- E) the most rapidly

18. You need to make up your mind quickly because, --- you have signed the official document, you will be legally married!

- A) in case
- B) not only
- C) once
- D) until
- E) whether

19. We have refrigerators in our kitchens --- our food will not go bad.

- A) by the time
- B) however
- C) otherwise
- D) so that
- E) whereas

20. Everybody knows --- the famous football player killed his wife, but no one can prove it.

- A) that
- B) what
- C) whether
- D) which
- E) who

21. We were extremely surprised when Peter resigned, because they had worked in the same department --- before the first factory had been set up.

- A) as
- B) as long as
- C) during
- D) for
- E) since

22. Most of the spectators were not satisfied with the football that our team displayed at yesterday's game, --- they?

- A) aren't
- B) did
- C) didn't
- D) had
- E) were

23. The city of Istanbul --- by a green belt of forests, but this --- to disappear due to forest fires.

- A) had surrounded/tends
- B) is surrounded/tends
- C) surrounded/tends
- D) surrounds/will have tended
- E) will surround/has tended

24. Guantánamo, --- the United States has a military base, is a Cuban city with many buildings in showing traces of French influence in their architecture.

- A) that
- B) when
- C) when
- D) where
- E) which

25. Heavy rains --- , so we --- our crop to into the silo; otherwise, we might lose a whole year's crop.

- A) are arriving/might have carried
- B) arrived/used to carry
- C) had arrived/had to carry
- D) have arrived/should have carried
- E) will be arriving/had better carry

26. Had I known the test was not in the morning but in the afternoon, I could have studied for --- hour!

- A) another
- B) each
- C) enough
- D) every
- E) whole

27. Have you called your landlady --- that you'll have your flat --- next week?

- A) having said/to be painted
- B) say/being painted
- C) saying/to paint
- D) to have said/paint
- E) to say/painted

28. Peter --- about his achievements so much that everybody in the office --- bored with listening to him.

- A) boasts/is to get
- B) had boasted/has got
- C) has been boasting/is getting
- D) is boasting/gets
- E) was boasting/will get

29. The Director --- his opinion about my project an hour ago, and it was a real shock for me to learn that he --- it days before that.

- A) has told/was rejecting
- B) is telling/has rejected
- C) was going to tell/had rejected
- D) will be telling/will reject
- E) will have told/rejects

30. Most people are fond of taking a quick walk early in the morning --- of whatever the weather conditions may be.

- A) as much as
- B) in case
- C) no matter
- D) regardless
- E) unlike

KONU 11

1. ANGER, BENEFICIAL, CARE, CLEAR, COMFORT, CONCERN, CONSTANT, DENSE, DEPEND, DESIRE, EMOTION, EVIL, EXPERIENCE, EYE, FEAR, FEEL, FIRM, FRAGRANCE, GRIEF, HAPPY, HELPFUL, HUMAN, INTEREST, JEALOUS, LACK, NEED, NERVE, OBSERVE, PASSION, PEACE, RELAX, RELY ON/UPON, REQUIRE, RESPECT, SCENT, SENSATION, SENSE, SENSITIVE, SOUND, SPLENDID, STAND, STIMULATE, STRESS, TOUCH, TRANQUILLITY, TREAT, VISUAL, WILL, WORRY

Complementary Medicine, sometimes called alternative medicine, is unconventional approaches to healing and health, many of which are now thought to complement conventional Western medicine. Shared care is only permitted if a registered practitioner remains in overall control; this is not always acceptable to practitioners of complementary medicine.

Traditionally, medicine as practised by a doctor has largely been mechanistic, with doctors picturing the body as a machine made of many parts, with the respective individual parts treated separately. The mechanistic approach stresses the role of doctors in the healing process as their intervention is active, and in general downplays the role of mental and emotional factors that may cause the disease or play a role in its natural evolution or treatment.

Holistic medicine (from the Greek *holos*, "whole") treats the person as a whole. It attempts to bring emotional, social, physical, and spiritual dimensions of the person's being into harmony and emphasizes the role of therapy or treatment which stimulates the person's own healing process. Holistic medicine highlights the interaction between the living body and the spirit, which in holism is defined as giving the person direction in life and a sense of inner happiness. Disease, is seen as an imbalance between social, personal, and economic stresses as well as biological influences. Paavo Airola, a leading proponent of holistic medicine, defines these stresses as fears, worries, emotional stresses, exogenous poisons from air pollution, food, water, toxic drugs, excess alcohol intake, overeating, over-indulgence in fats, and lack of sufficient exercise, rest, and relaxation.

Public interest in various aspects of Oriental medicine including acupuncture, massage, macrobiotics, and herbal medicine has grown steadily in the Western world. The concepts of Oriental medicine have their basis in Daoism. Daoists claim that there is a constant movement between two poles, the "yin" and the "yang", and that energy (vibration) between these two opposing poles is the activating force of all biological phenomena. They maintain that this constant flux, or movement, is easily observable in all living things—from a small molecule in a human being to a large planet. Yin can be defined as the tendency towards expansion and yang the tendency towards contraction (examples of yin are negative, female, passive, Earth, Moon; examples of yang are positive, male, active, sky, Sun, splendid, warm). Proponents of the art of Oriental medicine divide the body into a yin organ (a hollow organ of absorption such as the gall bladder or small intestine) and a yang organ (a dense, blood-filled organ of regulation such as the heart, liver, or kidneys). The level of *ki* required by a yin or yang organ depends on its density and structure.

The use of acupuncture as anaesthesia (to relieve or block the sensation of pain) began in 1958 when it was first used to relieve post-operative pain. Once the exact point needing treatment is located, the acupuncturist inserts a needle into the skin, the depth of insertion depending on the extent of the disease and the body system involved.

Shiatsu uses finger pressure instead of needles to apply firm pressure to various points of the skin known as pressure points. This alternative treatment is used to relieve pain and is said to revitalize patients.

Homoeopathic diagnosis and therapy treats the whole body as a unified organism. In the late 18th century, Samuel Hahnemann defined disease as "an aberration from the state of health" that cannot be mechanically removed from the body. In 1811 Hahnemann called for healing to be quick, reliable, and permanent and he believed that holistic medicine embraced all of these attributes. The basis of homoeopathy adheres to four basic laws. The first, the law of similars, holds that "like cures like": a drug that produces symptoms of a disease in a

healthy person will cure a person who has the disease. Significantly, this does not have a sound basis in conventional pharmacology.

The most comprehensive classification of herbal remedies was originally given in John Parkinson's *Theatrum Botanicum*, published in 1640. Some commonly treated conditions include colds and influenza (peppermint, ginger, yarrow); **insomnia** (passion flower, hops, lime flowers); and nausea and vomiting (camomile, peppermint).

Modern-day chiropractic medicine was introduced in 1895; today it is the largest healing profession that does not **utilize** drugs. The basis of the practice is essentially that the regimes instituted restore normal function to the joints of the body, which subsequently helps the patient regain health.

Osteopathic medicine is largely similar to chiropractic medicine and they have both evolved from the same practice. In general, osteopathy involves manipulation of the body and, more specifically, the spinal column, with rhythmic movements and massage to areas that may be causing **constriction** of nerves and blood vessels. Again, osteopaths claim to heal a number of injuries.

Oriental massage is designed to give relief from **fatigue**, sluggishness, stiff shoulders, headaches, and so on. Western massage concerns itself with nerves, joints, muscles, and the endocrine system, and with treating disorders such as strokes, poliomyelitis, numbness and joint pains, chronic abdominal pain, and chronic constipation.

Reflexology involves applying massage to certain points of the feet which **advocates** believe correspond to particular body functions and organs. If the organ is diseased, then the reflex region of the foot will be hypersensitive to touch, thus allowing for a possible diagnostic **adjunct**.

Meditation seeks to achieve self-awareness and awareness of one's relationship with the environment. During meditation thinking is separated from perceiving, so that the individual can stand apart from the emotional self. Having the advantage that it can be practised at any time in any place, it is best practised in a comfortable position with eyes closed, with complete relaxation of all muscle groups. Most meditation programmes involve increased **awareness** by focusing on the internal environment—some aspect of feeling; a thought; a physical process; or a sound. In addition, external focusing can also be achieved, such as on an object or a physical activity.

Relaxation therapy teaches individuals to recognize slight tension in their everyday life and enables them to deal with this. When an individual is stressed, then the so-called "fight or flight response" is activated, with the person experiencing increased heart rate, blood pressure, and **respiratory** rate. Yoga is a form of relaxation that promotes happiness in a state of inner tranquillity and balance, with inner peace and harmony at the root of the therapy.

Aromatherapy dates from the ancient Egyptians, who used scents of aromatic oils such as eucalyptus, lavender, and clove to treat skin disorders. The fragrance of the oil appears to be important in the therapy. Emotional disorders are also treated with aromatic oils: rose oil being thought good for jealousy, camomile for anger, and hyssop for grief.

Visualization is the use of the imagination to create pictures of desired situations or conditions. **Consciously** using visualizations allows participants to use the imagination in a structured way, providing clear links with dreams and desires and thus allowing relaxation and the control of the physical symptoms of disease.

Most Native American peoples believe in the healing power of mother earth. In this type of alternative medicine, illness is believed to occur when an imbalance exists between human beings and their environment. Conversely, human beings are healthy when this balance is maintained or restored; there exists a respectful relationship between human beings and their environment—mother earth. Most Native American healing practices use music, dance, and prayer in order to integrate human beings with mother earth and to **placate** evil powers responsible for illness.

Anthroposophical medicine was proposed by Rudolf Steiner, who intended the theory to be a natural extension of Western medicine. The theory behind anthroposophical medicine embraces three elements: a system of nerves and senses that provides a physical basis for sense perception and the formulation of thought; a system of metabolism and **limbs** that provides a physiological basis for life and life of the will; and a rhythmic system of circulation and respiration that is the basis of life. Proponents believe that doctors should not attempt to

eliminate illness from the body, but merely guide it in a beneficial way for the body, as it is seen that illness ultimately brings the individual to fulfilment.

2. ANGER, EMOTION, FEAR, FEEL, INSPIRE, LOVE, RESENT, STIMULATE, VOICE

Emotion is a term frequently and familiarly used as synonymous with feeling. In psychology it signifies a reaction involving certain physiological changes, such as an accelerated or retarded pulse rate, the diminished or increased activities of certain glands, or a change in body temperature, which stimulate the individual, or some component part of the individual's body, to further activity. The three primary reactions of this type are anger, love, and fear, which occur either as an immediate response to external stimuli or are the result of an indirect subjective process, such as memory, association, or introspection. The American psychologist John Watson proved in a series of experiments that infants are capable of these three emotions; he also demonstrated that emotional reactions may be conditioned.

The external stimuli diminish in importance, as a direct cause of the individual's emotional reaction, in proportion to the individual's maturity, and the stimuli that elicit these emotions develop more complexity. Thus, the same environmental condition that inspires anger in a child may cause fear in an adult. As the emotional degree of the reaction rises, however, the resemblance between the various kinds of reaction increases as well; thus, extreme anger, fear, or resentment have more in common than the same reactions in less exaggerated phases.

Momentary physiological change or distortion accompanies all emotional reactions, as in the instance of the accelerated heart action during a fit of anger. Fear, for example, may result in a violent physical manifestation such as the quaking of the limbs or a momentary loss of voice. It may also, by way of contrast, result in an attempt to disguise itself by means of an assumed coolness or bravado.

KONU 12

ABILITY, ASPECT, BASIS, CLEAR, COMPREHEND, DISTINGUISHED, FORGET, INTELLECT, LEARNED, MEMORIZE, MOTIVATE, NOTION, PERCEIVE, RECALL, RECOGNIZE, RECOLLECT, REMEMBER, REMIND, REVIEW, SLOW, THINK

In psychology, memory is the process of **storing** and **retrieving** information in the brain. This process is central to **learning** and **thinking**.

Memory has not one anatomical location. However, damage to highly specific brain areas, such as the mammillary bodies owing to a condition known as Korsakoff's syndrome, which is caused by severe alcoholism, prevents **acquisition** of new memories. Dementia results when widespread cortical damage occurs, commonly owing to problems in blood supply, or to Alzheimer's disease.

Research suggests some **aspects** of memory are associated with particular cortical areas: sounds and words with the temporal lobes, sight with the visual cortex, patterns with the parietal lobes, and faces with the frontal lobes. However, memory of an event relies on widespread regions of the brain, working together to create a gestalt, a whole. Thus, memory is stored as **separate** sense modalities that have to be put together **anew** each time.

Perceptions first occupy an immediate, iconic memory, then move to short-term memory, from which some transfer to long-term stores. **Recall** is often connected to the feelings that accompanied the event—**dull** events are hard to **remember**, life-changing ones are easy.

Animal studies indicate that structures in the brain's limbic system have different memory functions. For example, one circuit of neurones through the hippocampus and thalamus may be involved in spatial memories, whereas another, through the amygdala and thalamus, may be involved in emotional memories. Research also suggests that "skill" memories, like playing music, are stored differently from **intellectual** memories.

Four different types of remembering are ordinarily **distinguished** by psychologists: **recollection**, recall, **recognition**, and relearning. Recollection involves the reconstruction of events or facts on the **basis** of partial **cues**, which serve as **reminders**; recall is the active and **unaided** remembering of something from the past; recognition is the **ability** to correctly identify previously **encountered** perceptions or internal experiences as familiar; relearning may show evidence of the effects of memory. Material that is familiar is often easier to learn a second time than it would be if it were unfamiliar, suggesting this is a different type of memory.

In general, memories are less **clear** and detailed than perceptions, but occasionally a remembered image is complete in every detail. This phenomenon, known as eidetic memory, is usually found in children, who sometimes **project** the image so completely that they can spell out an entire page of writing in an unfamiliar language that they have seen for a short time.

The course of **forgetting** over time has been studied extensively by psychologists. Most often, rapid forgetting occurs at first, followed by a **slower** rate of loss. Improvement in the amount of material retained, however, can be achieved by practising active recall during

learning, periodically reviewing the material, and overlearning—that is, relearning the material beyond the point of **bare** mastery. This process relates memory ability to comprehension.

Four traditional explanations of forgetting have been provided. One is that memory **traces fade** naturally over time as a result of organic processes occurring in the brain, although little evidence for this notion exists. A second is that memories become systematically distorted or modified over time. A third is that new learning often interferes with or replaces old learning. Finally, some forgetting may be motivated by emotional needs and wishes—as when unpleasant childhood experiences are repressed or denied. These can be “re-memorized” under hypnosis or in psychotherapy.
